AMP IC Sockets

Complex printed circuits are too valuable to risk direct soldering to expensive integrated circuits (IC's). Socketing is the answer, and while the use of sockets obviously involves additional costs, it offers advantages that not only prove cost effective in the long run, but also simplify board design and manufacture. Some of these advantages are:

Repairability. The ability to remove socketed chip carriers easily aids troubleshooting and repair.

Lower service costs. Substituting a good chip for a bad one is less costly than substituting a good board for a bad one.

Reprogramming. Simple change of chips, such as ROM's or EPROM's allow circuits to be reprogrammed.

Future expansion. Sockets can be provided for future expansion of function.

Factory testing and burn-in. Testing a bare unmounted chip is not acceptable, therefore socketing is required.

Replacement of early-life failures. Advanced state-of-the-art chips, whose life cycle is still in the beginning of the learning curve, can have a high failure rate.

Manufacturing ease. During the startup of equipment, new IC packages are often not available in full quantity. Socketing allows assembly to proceed through testing by reusing on-hand chips. New chips can be plugged in when they arrive.

Following is an easy-to-use Semiconductor-to-AMP Socket Cross Reference which lists the most common devices by manufacturer, part number and description, including number of contact pins, and shows AMP part numbers of appropriate square and DIP sockets.

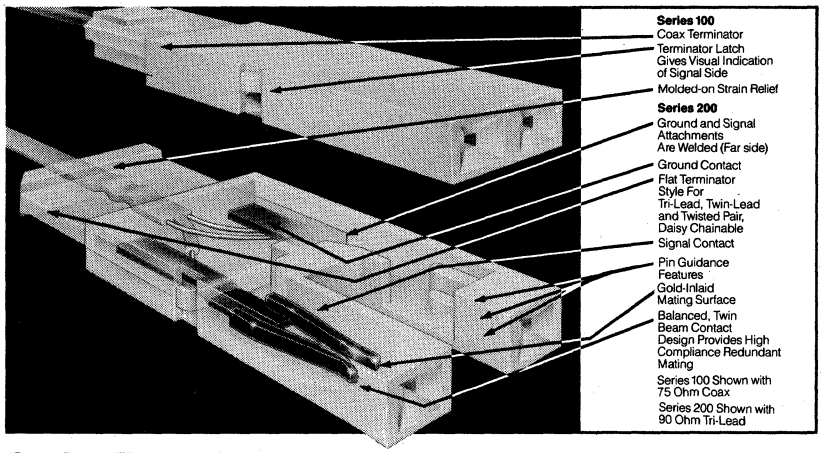
Mono Signal TLA®



3M's single-signal Transmission Line Assembly — TLA — set the industry standard. They allow pluggability of discrete cable runs that require different types of transmission line cable constructions.

Mono Signal TLAs are tough and reliable. Molded strain relief construction allows full strength in a small package. Signal and ground conductors are welded to appropriate contacts and encapsulated as the connector body is molded.

3M's Mono Signal TLAs can also be terminated to several types of BNC connectors that allow cable runs to be plugged onto the backplane while supplying a strong I/O interface.

Design Features:

- Controlled Impedance — The assembly is impedance matched to line driver's gate.
- Minimized Crosstalk — Signal lines are separated by ground wires.
- Reduced Attenuation — The assemblies feature low dielectric current cable for minimal signal attenuation.
- Minimized Rise Time Degradation or Pulse Distortion — Low loss dielectric materials and silver plated conductors help reduce distortion.
- Fully Tested One Piece Construction — Provides integral strain-relief as connector is molded to the cable. Assemblies are 100% tested.
- Modular and Versatile — .100″ and .200″ sizes mate with standard headers. Also available with BNC connectors.
- Fast and Repeatable — Can be used for high-speed signals or as delay line.

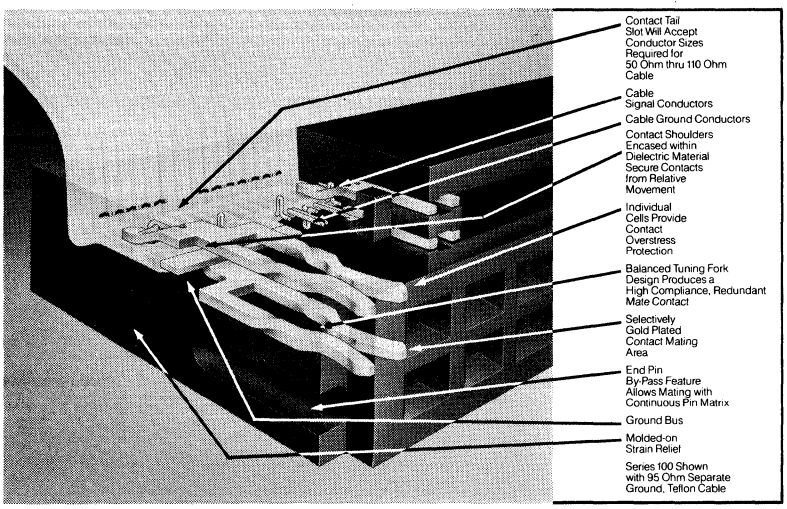
Multiple Signal TLA®



Fast rise times, reduced noise margins and fast switching speeds are all realities of working with today's high-speed digital circuits such as TTL, Schottky TTL and ECL.

Successful systems designers must be acutely aware of noise sources and how to control them. Connector and cable choices are crucial. This is especially true when long assembly lengths are involved, since cross-talk is related to cable length. 3M's Multiple Signal Transmission Line Assembly — TLA — is the perfect match for these high performance logic families.

The TLA system is a connector/cable interconnect assembly designed exclusively to maximize signal fidelity by controlling areas commonly associated with noise generation.

Design Features:

- Controlled Impedance — TLA assembly is impedance matched to line driver's gate.
- Minimized Crosstalk — Signal lines are separated by ground wires which are adjacent to, but isolated from signal lines.
- Reduced Propagation Delay/Attenuation — The assemblies feature low dielectric current cable for high-speed signals and minimal signal attenuation.
- Minimized Rise Time Degradation or Pulse Distortion — Low loss dielectric materials and silver plated conductors help reduce distortion.
- Advanced Design Ground Bus Connector — All grounds are bussed common within the connector, can exit at any selected positions.
- Fully Tested One Piece Construction — Provides integral strain-relief as connector is molded to the cable. Assemblies are 100% tested.
- Standard Connector Dimensions — .100″ × .100″ socket and .100″ × .200″ socket mates with standard headers. Card-edge also available.

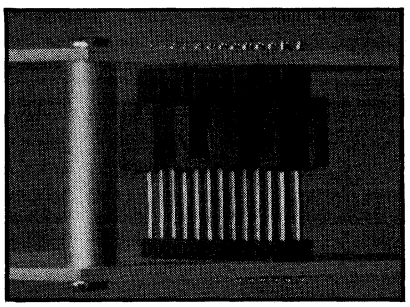
3M Associated Electronics Department — Board Stacking Systems

Board Stacking Systems from 3M eliminate the need for time consuming, expensive customization for board-to-board interconnection. Six standard configurations provide all the flexibility you'll need. Stack boards as close as a quarter inch or as wide as an inch with our standard systems. Choose gold plated or tin plated contacts. Some types allow up to 72 positions per system.

These modular building blocks eliminate the guesswork and custom requirements associated with board stacking of the past. You get electrical integrity at lower cost with popular off-the-shelf configurations.

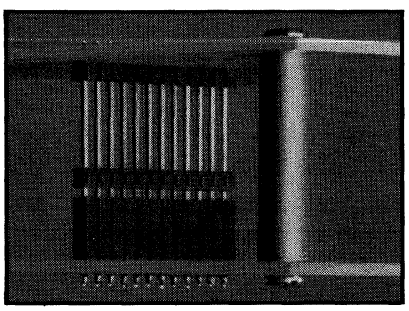
Note: Components not intended to be used as board spacers.



Dual Row Pin Strip with Shroud/Board Mounted Socket System.

Two pieces make up this system. Available in ten sizes from 10 to 60 positions, the dual row pin strip with shroud allows spacing from 7/16″ to 1″. The dual row pin strip with shroud is mated with a matching board mounted socket. The shrouded header assures positive alignment to the board mount socket. The pin strips are soldered to the PC Boards. Headers can be plugged and unplugged.

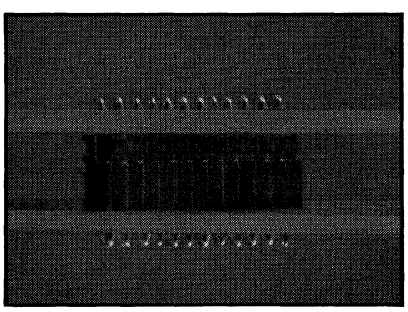
Design Features
- Choice of 5 standard stacking surface to surface dimensions.
- Choice of tin-plate or selective gold plating.
- 100″ standard spacing between all contacts and posts.
- Available with shroud on pin strip header in 10, 14, 16, 20, 26, 34, 40, 50, 60, and 64 positions.
- Assures positive alignment to board mount socket.



Pin Strip Header/Board Mounted Socket System.

The two piece pin strip/board mounted socket combination is available in both double row and single row configurations. Both pin strip and board mounted socket are soldered to the opposing boards and plug in between. Five standard spacing dimensions permit placement of boards from 7/16″ to 1″ apart. Single row systems are available with up to 36 positions and dual row systems accommodate up to 72 positions.

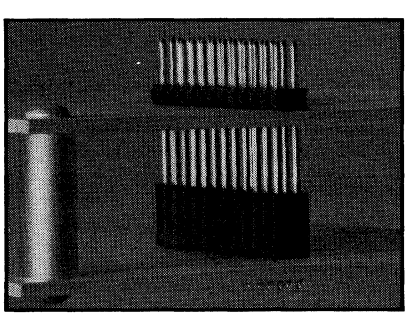
Design Features
- Choice of 5 standard stacking surface to surface dimensions.
- Choice of tin-plate or selective gold plating.
- .100″ standard spacing between all contacts and posts.
- Available in 1 to 36 positions per row.



Low Profile Pin Strip/Low Profile Board Mounted Socket System.

The two piece low profile board mounted socket to single insulator pin strip header system is available in single row systems only. Both headers are soldered to the opposing boards and plug in between. Three sizes include 1/4″, 5/16″ and 3/8″ spacing. The system is available with up to 36 contacts.

Design Features
- Choice of 3 standard stacking surface to surface dimensions.
- Choice of tin-plate or selective gold plating.
- .100″ standard spacing between all contacts and posts.
- Available in 1 to 36 positions.
- Provides low profile stacking capability.



Top Mount Pin Strip/Board Mounted Socket System.

The two piece top mount pin strip/board mounted socket system mates a pin strip to a board mounted socket, board-to-board, with contacts extending through the top side of the board holding the pin strip. This allows not only the board-to-board connection but the connection of an IDC socket to the top mount pin strip header. Board-to-board spacing of 3/8″ to 7/8″ is available with a .235″ standard pin length on the top mount pin strip. Single row systems are available with up to 36 positions and dual row systems accommodate up to 72 positions.

Design Features
- Allows for parallel mating of up to 3 printed circuit boards or cable to 2 PC boards
- Choice of 5 standard stacking surface to surface dimensions.
- Choice of tin-plate or selective gold plating.
- .100″ standard spacing between all contacts and posts.
- Available in 1 to 36 positions per row.

Materials
Insulator: Glass filled polyester; color — black; UL-rated — 94 V-O
Contacts: Full Hard Copper Alloy CA 764

Contact Finish Options: 100 μ inch 90/10 tin plate; 10, 15 or 30 μ inch selective gold plate over nickel on contact post; 100 μ inch 90/10 tin on solder tails.

Beau® Barrier Terminal Strips

CONSIDER THE ADVANTAGES OF BEAU THERMOPLASTIC STRIPS

Beau thermoplastic strips offer many significant advantages. The strong, resilient barriers. The quality and uniformity of the product. Our determined commitment to engineering excellence. And, with our large selection, you're sure to find the strip you need. Design in or cross over to Beau thermoplastic strips—the advantage is yours.

BEND BARRIERS WITHOUT BREAKING

Resilient thermoplastic reduces breakage dramatically. Production line and in-field damage are virtually eliminated.

TERMINAL TAILS ENCLOSED

Cavities are eliminated around solder terminal tails. Allows mounting on PCB without affecting circuit isolation. Eliminates entrapment of foreign matter. Reduces solder wicking.

CLOSED-SIDE STRIPS OFFER EXTRA PROTECTION

Closed side serves as a wire stop. Permits mounting components close to strip without shorting. Wires or screwdrivers can't pass through closed side to contact other wires, leads or PCB components.

HIGHEST U.L. RATING

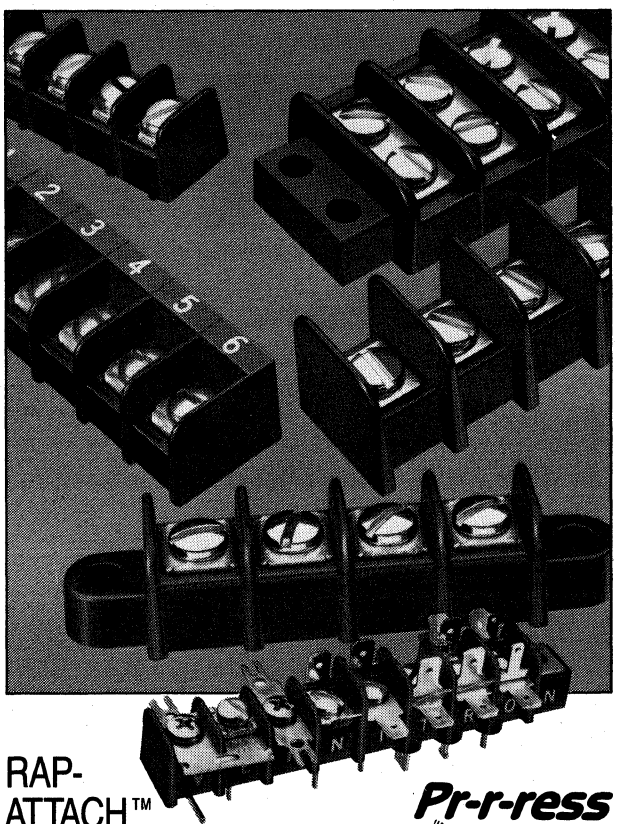
Our thermoplastic materials all carry the highest U.L. flame retardant rating: UL 94V-0 (self-extinguishing).

NEAT, ACCURATE MOUNTING ENDS

All our thermoplastic strips are molded to length. None are cut down from longer strips. They're neater, without ugly saw cuts. And they are precisely the same length every time.

WIDE VARIETY OF TERMINALS

There is a broad selection of top-side and bottom terminals—including quick-connect terminals which speed assembly time, cut costs and improve connections.



RAP-ATTACH™ MOUNTS SAVE 40% OF INSTALLED COST

Rap-Attach mounts (option) are the rapid new way to attach barrier terminal strips to PCBs or panels. Just press in the drive pins. The built-in prongs spread like a blind rivet. It's so easy, you can cut installed cost dramatically.

Non-conductive mounting.
Strain-free joints.
Wave solderable.

Beau® Interconnection Components

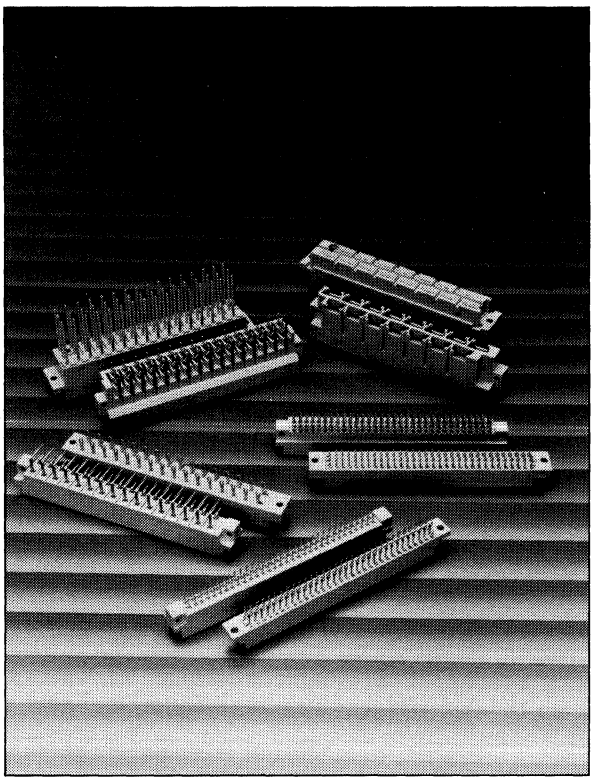
DIN 41612 PC CONNECTORS: MORE CONNECTIONS IN LESS SPACE, FOR LESS MONEY



Vernitron offers DIN 41612 printed circuit connectors that give you economical and highly reliable pin and socket connections to PC boards.

The DIN 41612 connectors also provide much higher contact density than edgeboard PC connectors, while eliminating problems with PC board warpage or variations in thickness. The price per circuit for the DIN connectors is comparable to edgeboard versions, and the amount of gold required on the PC board is greatly reduced.

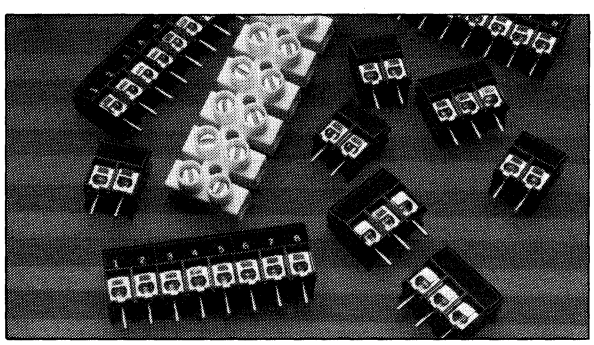
The DIN connectors consist of types B, C, R, D, F, and H, as well as type C connectors for flat cable. They feature contact spacing from .100" to .400", and 11 to 96 contacts, depending on type. All types conform to MIL, DIN, and IEC standards.

New, low-cost contacts.

Types B and C contacts are available with a new bifurcated cantilever option that offers lower cost and lower insertion and withdrawal forces. Tuning fork contact styles are standard.

You can choose from three quality classes of contacts made of copper alloy with hard gold or hard silver-plated finish. Contact tail types include right-angle PC, PC pin, solder lug, wire wrap, wire clamp, and quick-connect.

EUROSTYLE™ TERMINAL STRIPS AND TWO-SCREW TERMINAL STRIPS

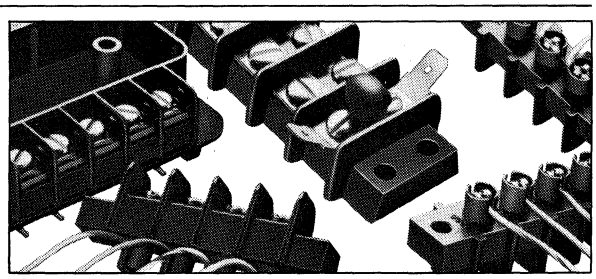


Series 85: These compact, single-row terminal strips are designed especially for PC boards. They can be molded to any length from 2 to 24 positions. Modular in design, they snap together easily while maintaining center-to-center spacing.

The strips have high circuit density (.197" contact spacing), and a very small footprint. Made in USA.

Series C: These two-screw terminal strips also are modular in design. They can be cut into smaller sections with a utility knife, while maintaining center-to-center spacing when installed end to end.

LOW-COST SOLUTIONS TO SPECIAL INTERCONNECTION PROBLEMS



There's almost no limit to the ways we can design cost-saving interconnection devices. By integrating barrier terminal strips with other parts, we can reduce your installed cost. Similarly, blade-type connectors have a wide range of possibilities. We can design for greater electro-mechanical performance, faster assembly, and more. We not only welcome your design problems, we thrive on them.

CATON
Caton Connector Corporation

High Voltage, Corona-Free Connectors and Cable Assemblies

Some of our best connector designs are 35 years old...

Our staff has been designing and manufacturing pulse cables and connectors for over 35 years. We are still designing and adapting them for new needs and applications and have over 1,000 items to fill virtually any need.

Our cable and connectors are water-tight, corona-free and ultra-reliable. They should be. We have more experience in the field than just about anyone.

We make hi-voltage lines from 1KV all the way up to 75KV for radar pulse systems, video, halographic, laser, infra-red optics, spectro-photographic and many other uses.

If you need special connectors, call the people who have been involved with them for a long time.

...some were developed this week.

CCM Series

High Voltage Cable Assemblies

The **CCM Series** is a basic and proven design. Standard quality materials, customization and a twenty year track record make this series ideal for most High Voltage Corona-Free cable assembly requirements.

Pictured here are some typical cable assembly configurations... but not limited to just these, please consult sales rep or CATON directly with your requirements, **1 thru 8 conductors available.**

The **CCM Series** utilizes standard MIL-C-5015 Class E aluminum shells. The inserts are resilient silicone per ZZ-R-765 with tapered self centering contours. When mated all air is excluded thereby making the connection impervious to the outside environment. All shields are circumferentially terminated using a grounding wedge which provides an excellent ground circuit and overall assembly durability.

Factory terminated assemblies have corona inception voltages of 4 KVAC thru 20 KVAC when measured on a corona test set with a minimum sensitivity of 15 picocoulombs.

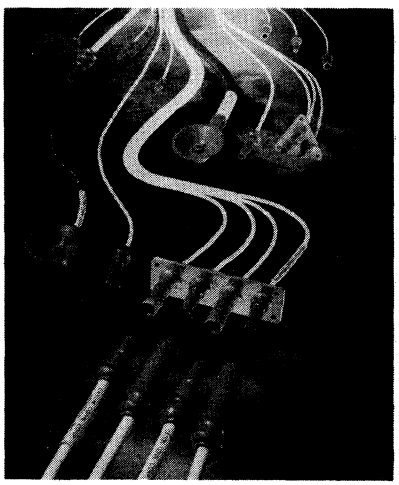
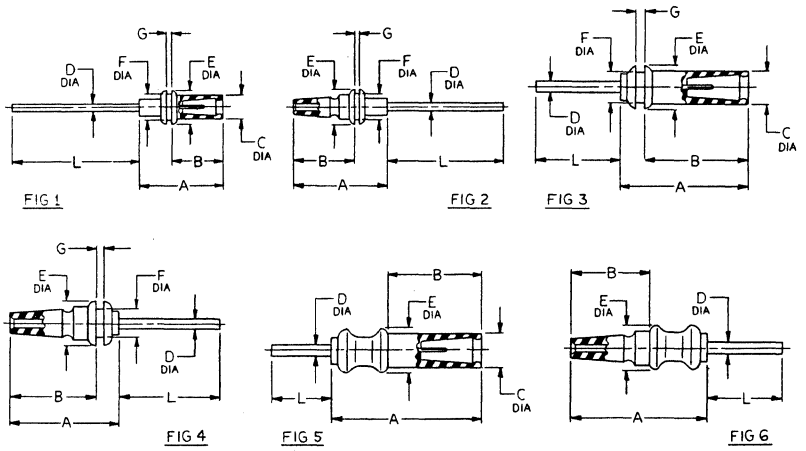
PM 200•300 Series
Silicone In-Line Connectors

Whether the application is a Clean Room test hook up or an oil and water laden harsh environment, the PM Series offers space saving reliable High Voltage, Corona-free performance at costs below conventional shell type connectors.

Air is completely excluded when these connectors are mated thereby making the connection impervious to air, water and most oils. The resilient silicone connector bodies offer quick connect and disconnect while still maintaining pull out force of 10–13 lbs.





Features

- 10-45 KVDC operating voltages
- 7.5-30 amp continuous
- grommet or in-line mounting
- wire directly molded to connector body
- −55° to +125°C
- no degradation to 70,000 feet

Specifications

Connector body: silicone rubber per ZZ-R-765
55 (female)–75 (male) durometer, color red
Female socket contacts: bronze per ASTMB-140, alloy B, gold plated MIL-G-45204
Male contacts: ½ hard brass per QQ-B-611A.
gold plated per MIL-G-45204
Wire: silicone tinned copper stranded, color white per MIL-W-16878/8

Applications

The PM Series has been used on applications such as land or air-borne radar, photocopy equipment (corona spells trouble in these machines), CRT displays, printing presses, and laboratory hook-ups.

STANDARD, CUSTOMIZED AND NEW DESIGNS

Because we have so many parts tooled, we are an excellent choice to produce your new and customized designs. Using our large tool library and in-house tool and mold making facilities, we get you into production fast, at an economical cost. **Call our engineers with your design ideas.**

Your order is expressly made to agreed specifications. As each requirement usually involves special features and combinations of materials and finishes, we do not stock finished products. However, we do stock most of the materials, enabling us to manufacture your parts as needed to meet your schedule.

ZERO DEFECT QUALITY

Our production facilities are fully integrated from raw materials to final assembly. We do our own stamping and molding. We also design and build our own automatic assembly equipment. This allows us to control our processes and thus serve you with our Zero Defect Program quality.

For samples and quotes, call our engineers at 312/539-3108 or TWX 910-221-6059.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

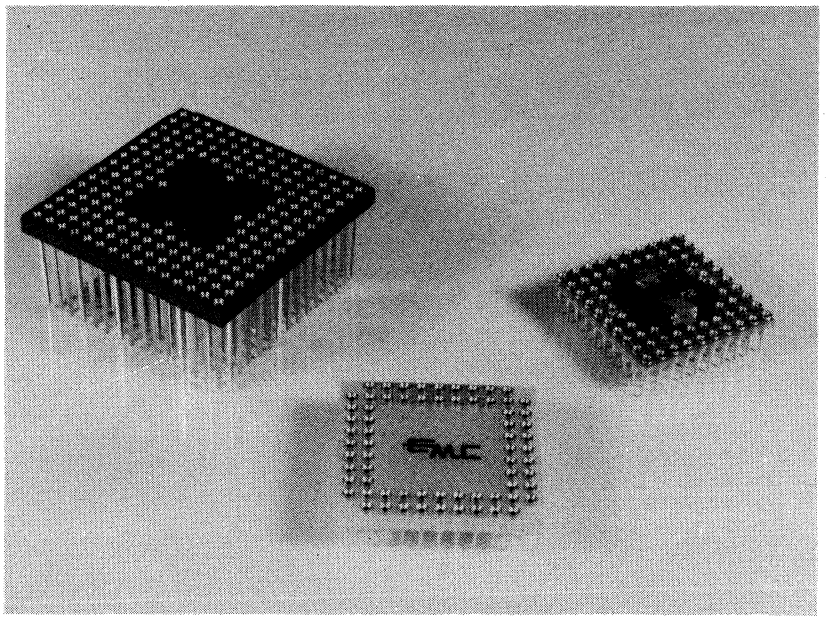
PIN-GRID-ARRAY SOCKETS



Pin-Grid-Array Sockets

EMC features the most comprehensive package of pin-grid array footprints in the industry. These PGA Sockets are available in grid sizes from 5 X 5 through 20 X 20. A wide variety of terminal styles with your choice of insulation material make your design-in easy.

EMC also features a complete line of PGA Sockets with SMD decoupling capacitors (Silencer™ PGA). These sockets have specific VCC and GND locations for dedicated gate-array devices. Two caps are used to ensure proper decoupling; a 0.1 MFD for low frequencies and a .01 MFD for high frequencies. The Silencer™ PGA's employ a ground plane as an interconnection vehicle between the GND termination of the pin thereby further reducing induction and providing a greater sheild against noise.

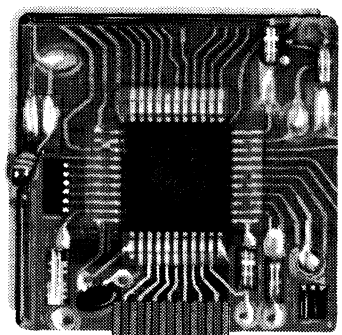
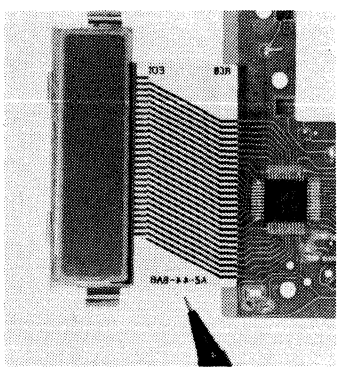
FLEXIBLE CIRCUIT HEAT SEAL CONNECTORS

The fast, reliable and economical way of connecting circuit boards to LCDs or membrane switches. Easy connections are made using heat and pressure. Align the connector, seal with heat and pressure for 10 seconds. That's all there is to it.

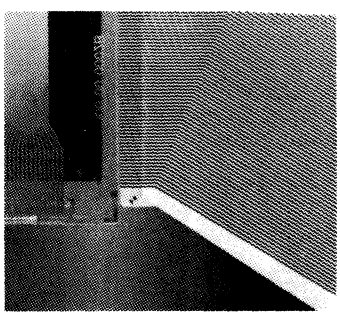
The Heat Seal connectors are available in the Graphite-Silver series and the Graphite only series. Connectors are built to conform to your engineering drawings. Contact spaces are offered down to .013" centers with as little as .05 ohms square resistance on a polyester backing. Our technology is based on years of development and is proven through mass usage.

Flexible circuit connectors save space and enhance product reliability. Overcome the aging problems and mechanical clamping of elastomeric connectors. The price is competitive and the quality is assured.





Connectors used to interface a PCB to an LCD in a hand held calculator.



Connector for the type of LCD display used as the monitor in portable personal computers. This particular connector has traces on a .016" pitch.

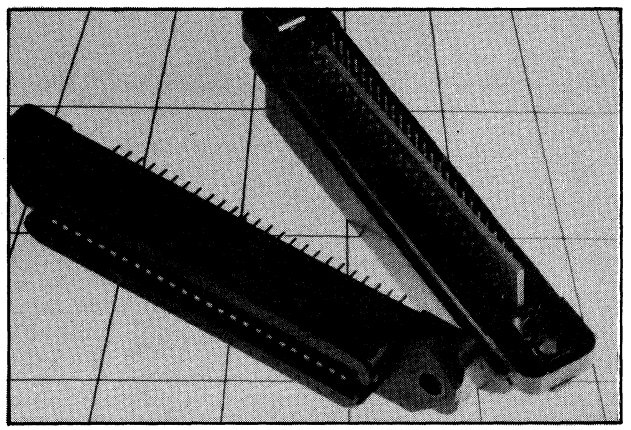
Discrete Connectors from Elfab



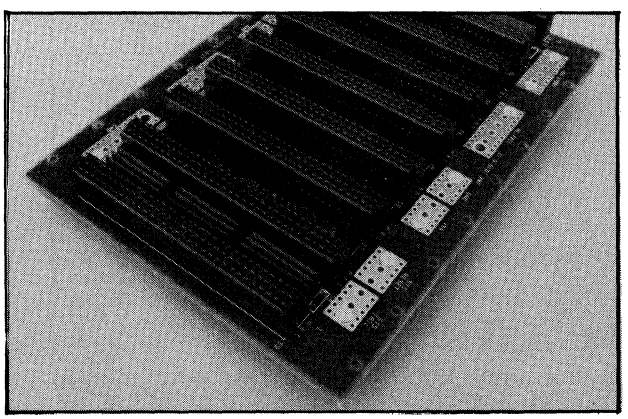
Tele Pac®

Used throughout the telecommunications industry in a variety of applications, the Tele Pac® connector mates with other industry standard connectors of its type. Tele Pac® is available in both solder and press fit styles with an all plastic housing. Although this PCB mounted connector is primarily intended as an I/O interface (cable to board), it can also be used as a board to board interface.

Adding a capacitor element to the standard version provides an EMI/RFI filtering capability which can eliminate the need for expensive shielded cable.

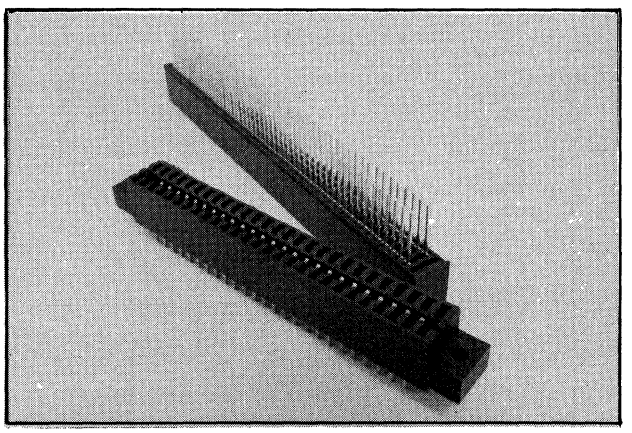
FEATURES:

- Press fit assembly without "special" assembly tooling. Only a flat plate press and board support fixture are required for assembly of press fit connectors
- Custom filters available for EMI/RFI "noise" suppression



VME Backplane

Elfab VME backplanes are designed to meet industry standard requirements. They are offered in 5, 9, 12, 20 and 21 slot configurations. Our VME backplanes are 100% electrically tested prior to leaving our factory to ensure total reliability.



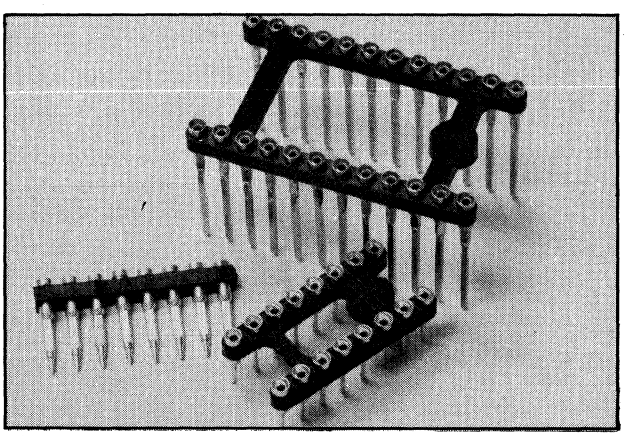
Value Pac™

Value Pac™ card edge connectors are available in solder and compliant pin press fit styles with a variety of tail lengths to provide direct interchangeability with most currently available connectors.

For the ultimate in simplicity, the assembly of press fit connectors requires only a flat plate to press directly on top of the insulator housing. No special tooling is required.

FEATURES:

- Available in three grid sizes: .100 × .200, .125 × .250, .156 × .200
- Available in both .550 and .610 high housings with .410 card slot depth
- Selective plating for efficient gold use



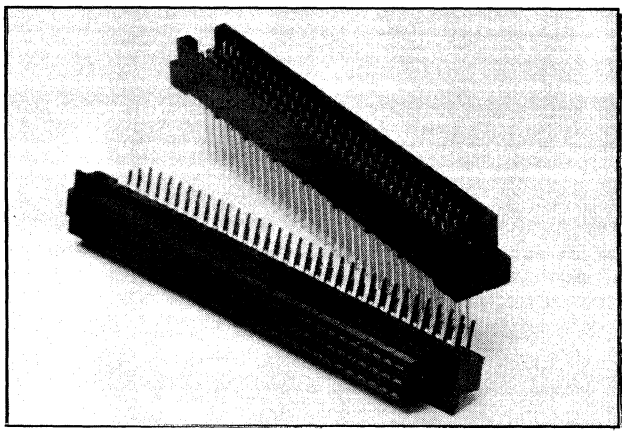
Soc Pac®

Soc Pac® precision I.C. socket connectors are available in either standard SIP or DIP configurations as well as loose pins. All connector sizes are available in standard solder or new press fit styles with 0, 2, or 3 level wire wrap tail lengths.

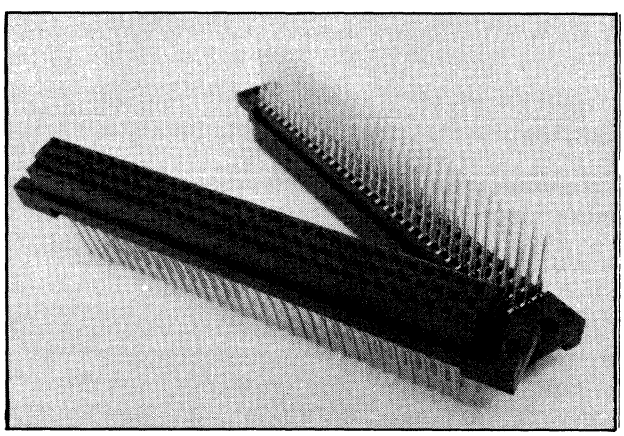
FEATURES:

- Precision machined brass body
- Beryllium copper spring contact
- 100% oriented contact clip
- Wire wrap tail allows rear plug up of box connectors

Discrete Connectors from Elfab



Inverse DIN



Standard DIN

DIN Connectors

The DIN connectors are primarily used as a board to board interface system. These connectors are directly interchangeable with others designed to meet the international DIN 41612 standards. The standard and inverse versions differ only in the placement of the plug and receptacle connectors. In the standard application, the receptacle or female connector is backplane or rack mounted. In the inverse application, the plug or male connector is utilized in this location. Backplane mounted connectors in both versions are offered in either solder or compliant pin press fit styles. The DIN series is an excellent alternative to a card edge connector system as it offers greater contact density and lower insertion forces at comparable per line cost.

FEATURES:

- Rear shrouds available for rear cable or board interface
- Solder and wire wrap tails available

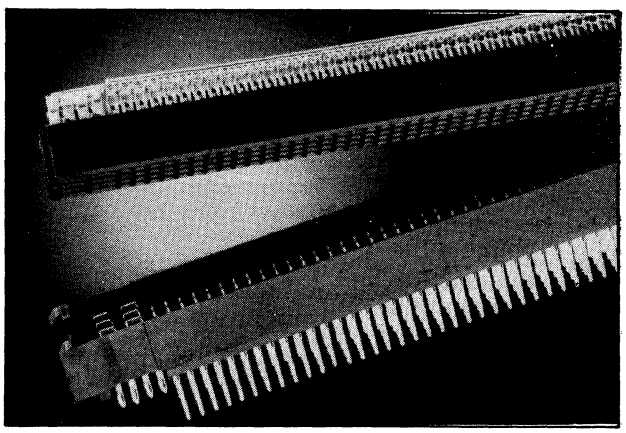
Quality and Innovation

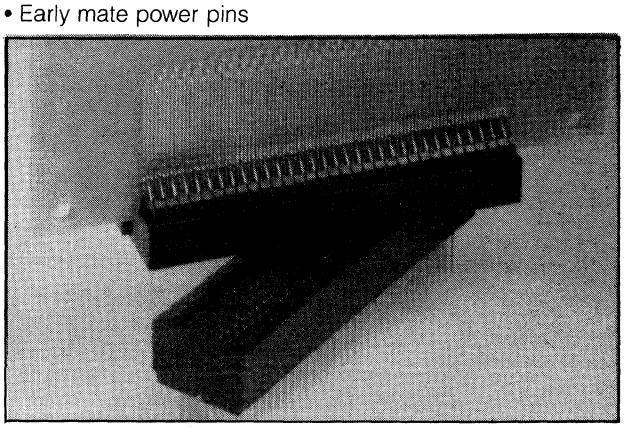


Four Row Box Pac™

The Four Row Box Pac™ high density interconnect system has 4 rows on .100 grid. This system allows for the shortest conductor path between module board and backpanel, with consistency of distance between all four rows. The female surface mount adapts to either vapor phase or reflow soldering. The male is available in either press fit or solder tail.

FEATURES:

- Optional power and ground busses
- Optional keying
- Low insertion force
- Early mate power pins



Six Row "Double-Din"

The six row version of the Four Row Box Pac (above) is double the density of a standard DIN connector. Available immediately from production with 6 rows, 32 pins per row. Female surface mount connector allows for the shortest conductor path between module board and backpanel with consistency of distance between all 6 rows. It adapts to either vapor phase or reflow solder. The male connector is available in either press fit or solder tail.

FISCHER AMERICA, INC.

High Performance, Automatic Locking, Circular Connectors

The Fischer Interconnection System offers you excellent performance in an aesthetically pleasing package. Highly reliable electrical and mechanical performance is achieved through use of precision machined shells and gold plated contacts.

The unique automatic locking system provides positive and reliable coupling, while eliminating any possibility of contact damage through use of a patented, metal semicircular polarization system.

Over 3,000 combinations of shell and contact configurations provide you with unparalleled design flexibility. The modular construction allows non-standard combinations to be achieved easily without NRE or tooling charges.

Our sealed connectors' standard features include vacuum tightness to 10^{-8} Torr, pressure to 8 Atms., and immersion depths to 200 meters. These qualities are ideal for medical and other applications requiring general environmental sealing or sterilization by autoclave, chemical, gas, or gamma radiation.

Connectors are listed by series.

Connectors are listed below by series with maximum voltage/current ratings and number of pins. The popular 102 through 105 Series are described in greater detail on the following two pages.

L = High Temp. (Rear Release only)

FEATURES

The Mil-C-5015 (Navy) connector specification is one of the most widely used specifications for circular connectors. The latest series is suggested for new design in both Mil-Std-1353B and Aerospace Recommended Practice 1308B. Its use is increasingly popular in both military and commercial environments where high reliability and low installed cost are important.

These MS circular connectors are manufactured by Flight Connector in the above classes in shell sizes 10 through 44 for use in all Aerospace/Military applications. Threaded couplings provide for high shock low cost. The high shock standard of class D is perhaps the most demanding of all military specifications. Front release removable contacts are utilized where the specific application requires more convenience for the wiring of the assembly. An audible click insures positive contact retention.

FEATURES

The Flight Connector MS345X series incorporates a threaded coupling and removable rear release crimp contacts and is fully intermatable with existing Mil-C-5015 and threaded Mil-C 83723 Series II (USAF) connectors. Construction is similar to the front release connectors except that the contacts are removed through the rear release cavity.

Connectors are protected against degradation caused by caustic substances and are rated for temperature ranges from -50C to +200C. Electroless nickel or cadmium plating may be specified for applications finishes.

Flight Connectors offers construction in aluminum as well as stainless steel. Shells, hardware and backshells offered are finished with olive drab cadmium for corrosion resistance. Stainless steel components are finished in black cadmium. Elastomers are silicone and insulators are glass filled thermosetting epoxy. As a QPL Approved source for this MS series TransTechnology units provide both connector and cable requirements.

Along with these off-the shelf connectors we offer the capability to design and manufacture complete cable systems, interconnection assemblies, individual cables, and/or modified connectors according to the dictates of the application need

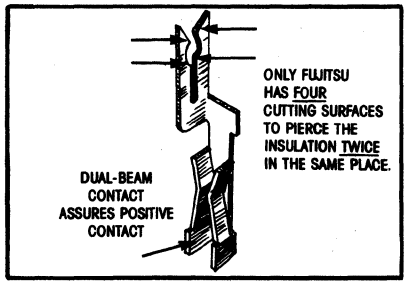
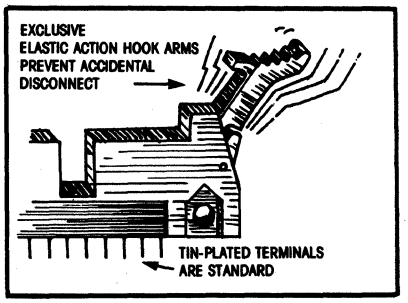
FUJITSU: FLAT CABLE CONNECTORS

Flat cable connectors are easy enough to find. The trick is finding connectors that can handle every one of your needs consistently, conveniently and economically. Fujitsu flat cable connectors do it all. And they do it better than most.

When you buy Fujitsu, you know you're getting components that will always fit your usage because our connectors are compatible with 3M and other major brands. You won't be getting hit-or-miss construction, either. Thanks to Fujitsu's standardized automated manufacturing. Each piece must meet our rigid quality control standards before it is shipped.



Assembling Fujitsu connectors is a snap, too, because of their simplified design. Like u-contacts that pierce the insulation twice at the same place to provide a gas-tight metal surface that is electrically reliable. And can withstand excessive pulling forces. And when you order Fujitsu flat cable connectors, you know you will always get tin-plated terminals that improve solderability and prevent gold contamination of the solder bath. Can your source say that?



A Fujitsu exclusive is the ingenious elastic hook arm that prevents accidental disconnection at the receptacle. And our dual-beam contact assures positive contact even during vibration and excessive handling.

Concerned about cleaning? Fujitsu's superior PBT resin stands up to chemical agents such as Trickren and Chlorosen which can't be used on cheaper, conventional thermoplastics.

Fujitsu considers it a point of pride, as well as good business, to cater to your company's needs before, during and after the sale is made. Our warehouse is stocked to supply your company with samples of our fine products. And Fujitsu can match *any* source's lead time for processing and shipping ... at a competitive price.

The FCN-700 series offers vertical, right angle and wire wrap plugs *and* open or closed covers for both end-cable and through-cable applications.

Considering all these points, you'd be smart to come to the source with the best connections. Where quality, reliability and service are part of our product. Fujitsu.

IDC TOOLS

Special tools are needed for FCN-210 Series connectors: a cable cutter, a locator plate for positioning connectors and cables, and a hand press to apply pressure. (See the figure below.)

FEATURES

- All tools are easy to use, so even a beginner can install Fujitsu connectors.
- The number of pins can be changed easily only by setting the connector guide to a specified pin hole.
- The cable cutter remains sharp, providing fast, easy cuts for a long time.

Note:

- Instruction manual for each tool is attached with each.

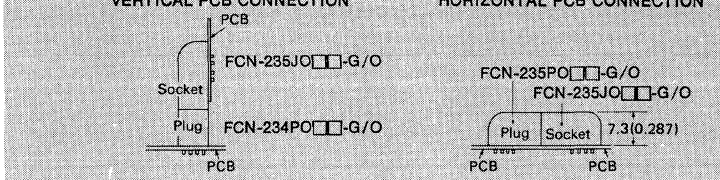
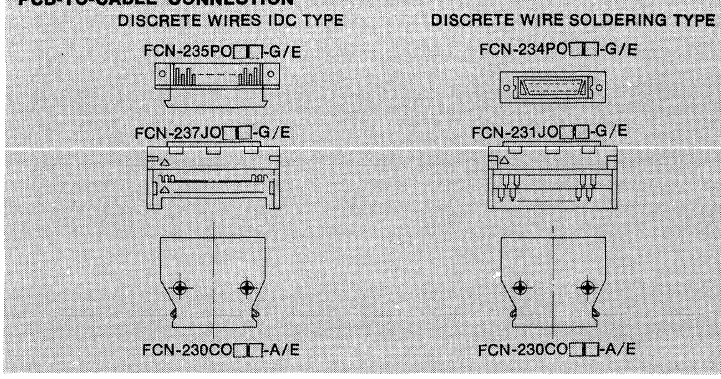
EXAMPLES OF CONNECTOR APPLICATIONS Unit: mm (in.)

PCB-TO-PCB CONNECTION



PCB-TO-CABLE CONNECTION



FEATURES

- 1.27 mm (0.05 in.) pitch contact arrangement in two rows enables high density mounting.
- Terminals are spaced in a four-row zigzag array (2.54 mm (0.1 in.) x 1.905 mm (0.075 in.)) for easy PC board design.
- IDC termination for discrete wire is available.
- Metal cover enables EMI protection.
- The insulation material is recognized by UL (94V-0).
- Insulation material is not affected by chemical cleaning agents, such as trichloroethylene and trichloroethane.
- Each of the contacts on the female connector are alternately inset to facilitate two step coupling, significantly reducing insertion force.

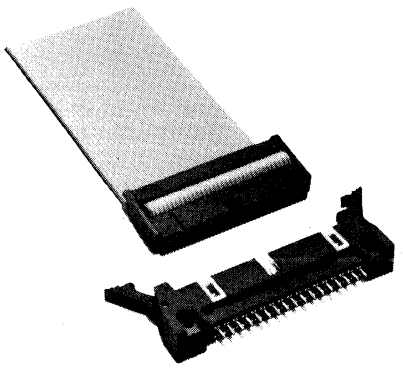
MODEL FCN-700



FEATURES

The Model 700 connector has a superior ejector with a unique flexible hook. Header terminals are tin-plated and have superior cost performance; the solder dip section is made into a 0.5 mm (0.020 in.) square and can be used in a ϕ0.8 mm (0.031 in.) through-hole. A special strain relief prevents wire breakage, and incorrect insertion is prevented by two kinds of keys and bump polarization. Connectors with 4 mm (0.157 in.) terminals have also been serialized for mounting on multi-layer PC boards.

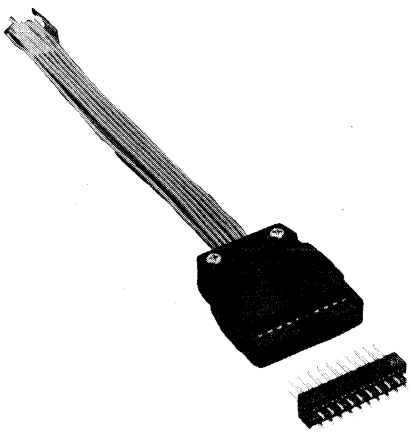
MODEL FCN-720



FEATURES

This crimp connector has been designed for wide use, and comes in many shapes and contact arrangements (one and two rows). The Model 720 block headers are matable with the Model 700 and 740 sockets, and Model 720 sockets are lockable with Model 700 headers when a special cover is used. Female contacts are secured in the housing by a unique internal spring structure. High-pressure contacts are also available which prevent accidental disconnection in applications using only a few contacts. For the W and S type headers, insulation molds can be broken into the necessary size.

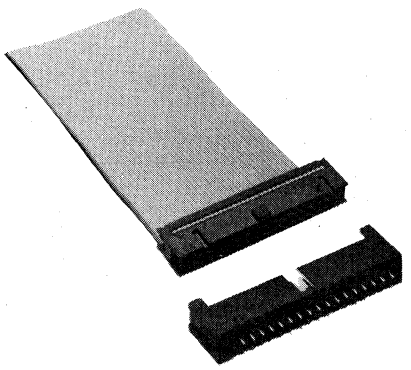
MINI SOCKETS & HEADERS

MODEL FCN-740



FEATURES

This mini-header and socket were developed to provide a compact set of connectors—their combined height is less than half that of the Model 700 connector. Unique plastic retention clips prevent disconnection due to vibration. There are up to 34 contact header and socket combinations, and the socket can be mated with all contact numbers of the FCN-700 header with S hooks and locked. The mini-header has an integral polarization to ensure correct insertion.

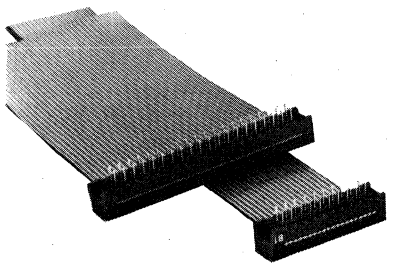
MODEL FCN-750



FEATURES

The Model 750 connector is slim—only 7 mm (0.275 in.) high and wide—and takes up very little space. The pins are in a 2.54 mm (0.100 in.) grid. It can be changed from a two-piece type connector to a direct solder dip connection without changing the PC board, because the mounting hole layout is the same as the Model 700 connector. And the series offers 10 to 60 contacts like the Model 700 connector.

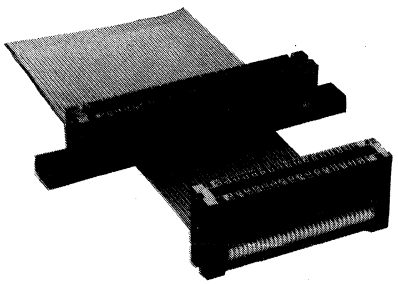
IDC CARD EDGE CONNECTORS

MODEL FCN-760



FEATURES

Model 760 connectors are card-edge connectors which meet conventional PC boards 1.6 mm (0.063 in.) thick with 2.54 mm (0.100 in.) pitch, and also connect to flat cables with 1.27 mm (0.05 in.) pitch. Contacts use highly reliable bifurcated contacts to assure stable connection with PC boards. A wide variety of contact numbers and three types of mounting ears are available for different needs. A closed-end cover is also available for convenience.

Designate the following in the □.

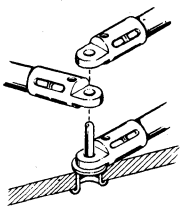
9W WIRE TERMINATION SYSTEM



Design Features

SOLDER-WICKING BARRIER

The design of HIRAM JONES 9W Wire Termination Systems provides a solder-wicking barrier, assuring flexibility of the wire and thus minimizing wire failures due to fatigue.

Wires are inserted in the 9W Crimp Terminals and crimped in place. Full engagement of the wire is determined by means of the inspection hole provided in each crimp terminal. The 9W Crimp Terminals are then attached to their mating Terminal Posts and soldered in place.

The entire termination is made without application of solder to the wire itself. It is, therefore, impossible for solder to "wick" up the wire.

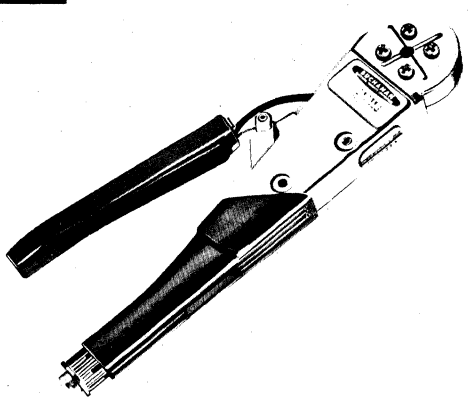
EQUIPMENT SERVICEABILITY

HIRAM JONES 9W Wire Termination System provides all the advantages of a hard wired system without the disadvantages of foreshortening of the service loop when disconnection and reconnection is required. The ease with which connections are made is a feature which is particularly advantageous in systems where connectors are undesirable, yet assemblies or sub-assemblies must be disconnected from time to time for service or replacement. To disconnect HIRAM JONES 9W Crimp Terminals, simply heat and lift off the mating terminal post. Reconnect by resoldering the 9W Crimp Terminals to the terminal post. Neither the mechanical nor electrical joint is affected by repeated removal and resoldering.

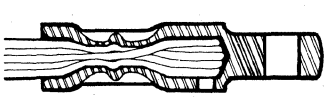
Increased Production Efficiency

By permitting pre-assembly of wires by unskilled operators, HIRAM JONES 9W Wire Termination Systems reduce production costs. Wires may be cut to length, stripped, and the 9W Crimp Terminals crimped in place. Final assembly consists of simply laying the pre-assembled Crimp Terminal on its mating terminal post and soldering in place.

9W MINIATURE MICROCRIMP TOOL



CROSS-SECTION OCTADENT CONFIGURATION



The 9W Miniature Microcrimp Tool (Buchanan No. 612118) is cycle-controlled to assure crimping to the selected depth. Once the crimping operation is started, the tool cannot be opened without completing its cycle.

9W LOCATORS — Specially designed locators are available for each of HIRAM JONES 9W Crimp Terminals. The use of one 9W Miniature Microcrimp Tool and the custom-designed 9W Locators is recommended to guarantee the precise crimp depth setting for each Crimp Terminal. When ordering, specify part number — i.e., 9W-206 Locator.

OCTADENT CRIMP — The 9W Miniature Microcrimp Tool produces an octadent configuration which provides uniform displacement of wire and crimp terminal material. The wire strands and the crimp terminal material are formed together in a solid mass with little or no reduction of the mil area of the wire strands.

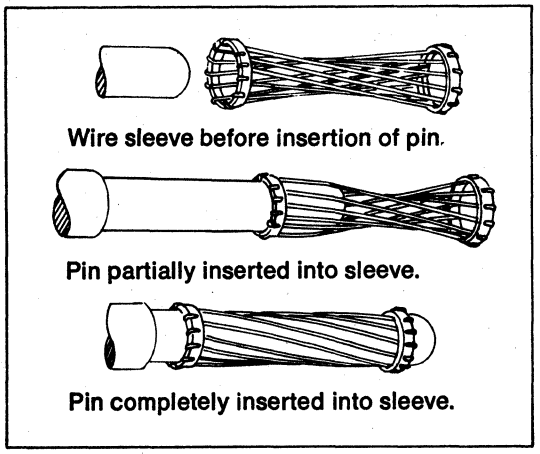
Hypertac® LOW INSERTION FORCE CONNECTORS



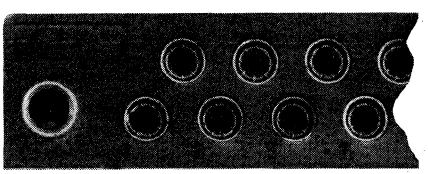
Hypertac® (HYPERboloid conTACt) is an advanced design that satisfies performance requirements previously considered impossible. Radically different in concept (principle is shown in the drawing), it is used in connectors having the highest performance requirements. The distinguishing feature of the Hypertac® socket is the hyperboloid-shaped sleeve formed by wires strung at an angle to the socket's axis. When the pin is inserted into this sleeve, the wires stretch to accommodate it. In so doing they wrap themselves around the pin providing a number of linear contact paths. This superior mating principle offers many advantages:

Lower Contact Resistance: Contact resistance is largely a function of contact area and surface condition. The multiple line contacts in the Hypertac® provide far greater contact area than other contacts of comparable size. The positive wiping action of the wires insures a clean and polished contact surface. Tests have shown Hypertacs® have about ½ the resistance of conventional contact designs.

Higher Current Ratings: The design parameters of the Hypertac® (e.g., the number, diameter, and angle of the wires) may be modified for any requirement. For example, the number of wires (no less than 5) can be increased so the contact area is distributed over a larger surface of the mating pin. Thus, the high current carried by each wire because of its intimate line contact, can be multiplied many times. At the same time the lower resistance reduces heat buildup. Therefore, Hypertacs® are able to handle far greater currents in smaller contact assemblies without the detrimental effects of high temperature.

Lower Insertion-Extraction Forces: Complete encirclement of the pin, along with greater contact area, make high contact forces unnecessary. The spring rate and resultant stress are therefore very low. The smooth insertion-extraction force is so low that even our 700 pin connectors can be easily disconnected without jack screws.

Less Wear and Longer Life: Reduced contact pressure also means a lower rate of wear. The taut wires having a small deflection relative to their span insure constant pressure, voltage drop and current ratings. Hypertacs® have a life of over 100,000 insertion-extraction cycles with almost no degradation in performance. Test pins with 50 micro inches gold plating had no base metal exposed after 8000 cycles (MIL-STD requires only 500 cycles for the same plating thickness).



Greater Reliability: The contact redundancy of multiple wires wrapped around the pin insures the ultimate in contact integrity. Elasticity of the wires also enables the socket to accommodate bent or misaligned pins.

Exceptional Electrical Continuity Under Shock and Vibration: The low mass and resultant low inertia of the wires relative to their resilience enables them to follow the most abrupt or extreme excursions of the pin without loss of contact. Tests conducted over the entire frequency range showed no discontinuity even when measured as low as 8 nanoseconds at 50 g rms. Moreover, the contact area is not limited to a single plane. It extends 360° around the pin and is uniform over its entire length. The three dimensional symmetry of design guarantees electrical continuity regardless of the direction or intensity of external or inertial forces.

Higher Uniformity: Machined rather than stamped parts, simple contact surfaces and selective plating before assembly avoids the possibility of shadow effects, gradients or trapped residues which could affect performance. Excellent physical and performance uniformity is thereby assured within each unit as well as perfect repeatability from unit to unit.

Requirements for connectors are such, that no matter how many details are incorporated in a brochure or catalog, we cannot include all types and variations. We would be pleased to consider your particular requirements; simply furnish all pertinent data to our Customer Service Department.

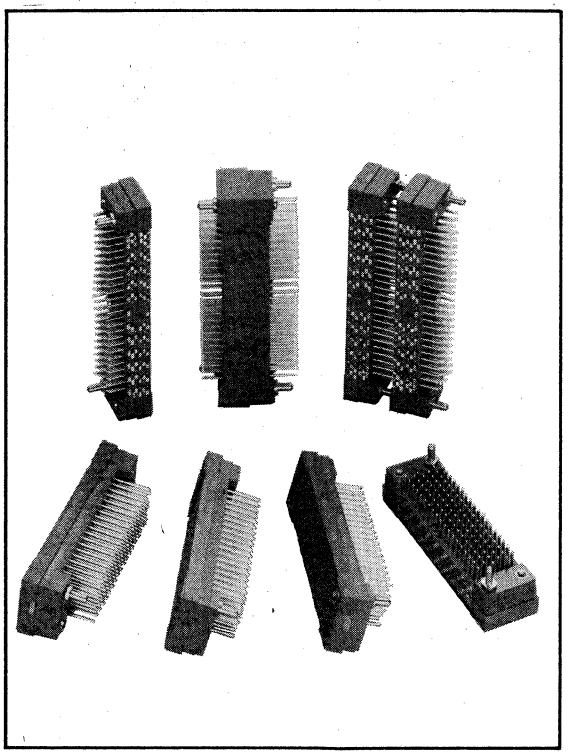
STACKING/BUSSING P.C. BOARD CONNECTORS

NEW

Low Insertion Force



These stacking connectors are composed of contact sockets at one end and tails, which are mating pins, at the other. The series allows PCB's to be placed one on top of another with all electrical connections between boards routed through the stacking connectors. This forms an electrical buss with drops to every board in the stack. This eliminates the traditional backplane, increases system speed, reduces size, all of which decreases cost.

111 and 135 position models with various standoffs to accommodate different component heights.

Various accessories which include dummy pins and sockets allow selective circuit interruption.

2.5mm (.100″) grid spacing with 1.27mm (.050″) alternate row offset provides high density.

Front removable contacts .76mm (.030″) allows quick repairs.

Rated Current: 5 Amps/Contact.

Breakdown Voltage: 1,200 Volts.

Temperature Range: −55° + 125°C (−65° + 260°F).

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Introduction for Connector Specifiers

This handbook is to help you quickly determine which LEMO connector meets your needs.

There are 4 variables you should identify in specifying a connector:

1. Number of contacts
2. AWG
3. Voltage and current
4. Cable jacket outer diameter (for collet)

The tables on the following pages present this information concisely.

FIRST: Find the tables for the connector family which interests you. **See Table of Contents.**

SECOND: On the table selected, locate the size which accommodates the 4 variables noted above.

THIRD: Locate the outer shell configuration in the back section of this booklet. Other configurations may be available for special applications.

If after using this reference you require additional information, please request our full-line catalogs for more details and other special application connectors. For your convenience use the attached business reply card.

PLEASE NOTE: If you do not see what you need please ask us. LEMO is constantly developing new products; therefore, all available connectors could not be included in this reference.

Voltage Test Procedure

PROCEDURE FOR DETERMINING TEST VOLTAGES AND WORKING VOLTAGES FOR LEMO CONNECTORS:

Test Voltage: Test voltages are determined by taking an average of the points at which arcing occurred and reducing it by 1/3.

Working Voltage: Working voltages are determined by taking test voltages and reducing them further by 2/3.

LEMO guarantees the proper functioning of the connector at working voltages.

Although this may appear quite conservative, it is in keeping with LEMO's insistence on assuring proper functioning and maintenance of high-quality standards.

AMPS noted are per contact.

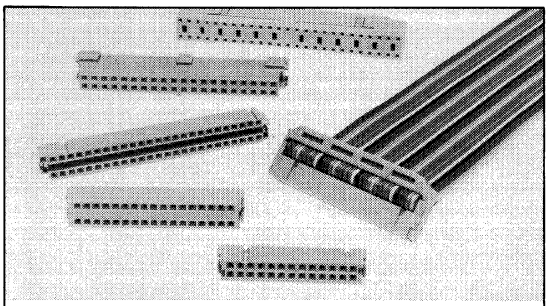
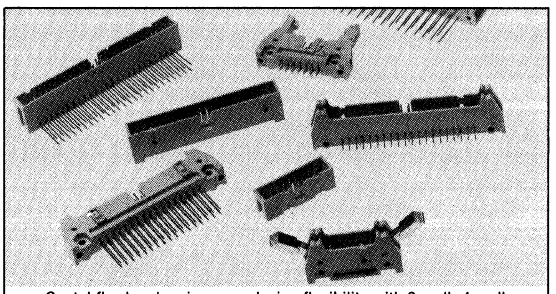
Design flexibility stiffens when you can't get all the connector features you need from one source.

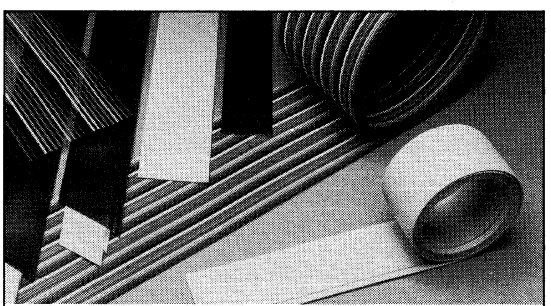
With 3M's broader line, you're covered.



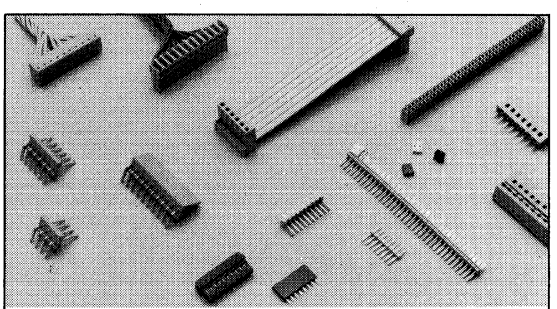
Scotchflex® sockets, available in many grid spacings and pin counts, offer patented U-contacts for reliable terminations, polarizing keys and strain relief.



Scotchflex headers increase design flexibility with 3-wall, 4-wall and boxed low-profile designs, plus pin strip headers. 3M pin strip headers, offering straight and right-angle mounting, can be stacked side-to-side or end-to-end for maximum design flexibility.



Scotchflex ribbon cable is available in flat-jacketed round, color-coded, ground plane, jacketed, jacketed/shielded and high-flex designs.



Our new Modular Connector System, or MCS line, broadens our range of printed wiring board connectors and cables, allowing you to specify 3M reliability for more applications than ever before.

Now 3M's broader line of connector/cable products substantially increases your design flexibility, with a vast array of interconnection systems for .100″ and .156″ applications.

Our patented "U-contact" gives all our connectors increased reliability when terminated to flat cable. Our patented L/H contact lowers the insertion force necessary to make a connection while raising its retention capability, creating a reliable connection that stands the test of time. All 3M contacts are beryllium copper, phosphor bronze or nickel-silver, with gold or tin alloy plating, for maximum design flexibility. Bodies are nylon and polyester.

3M flat cable comes in 18–30 AWG gauge with shielded and round jacketed versions available to complement the Scotchflex/MCS connector line.

Choose from sockets, headers, plugs, PCBs, DIPs, card-edge connectors, D-subminiature, Delta Ribbon, DIN, Splice and Tap, Flex Circuit connectors and much more.

Our new, broader line of components is backed by The 3M Risk Reduction Plan, which helps cut scheduling and design risks by getting you the connectors and reliable specs you need, when you need them. For further information, see your 3M distributor or call our toll-free product information hotline: 1-800-328-7732.

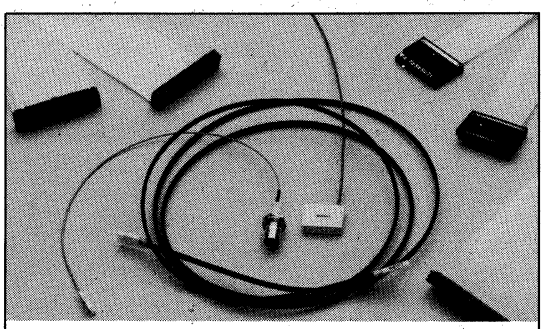
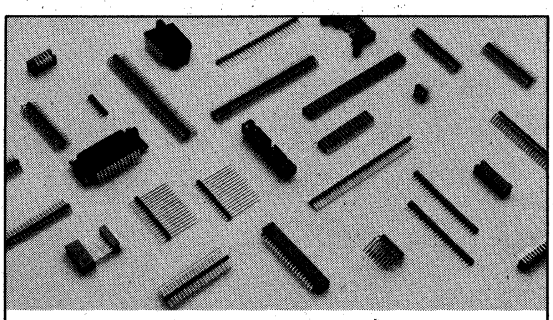
3M

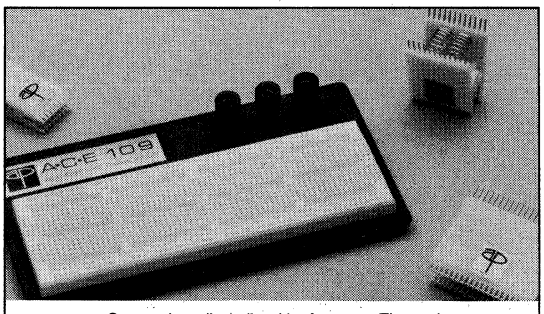
Design time is wasted when you can't get standard and customized connectors from one source. With 3M's broader line, you're covered.



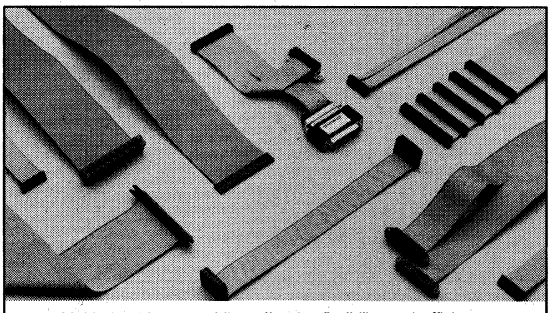
Chabin™ transmission line assemblies maximize signal fidelity in high speed computer and peripheral applications.



Our line of pin strip and shrouded headers is broad enough to provide the pin length you need to meet any of your design criteria.



Custom breadboarding kits from our Electronic Specialties unit offer quick and easy prototyping and modifying of circuits. IC test clips in a variety of sizes.



Molded cable assemblies offer the flexibility and efficiency of ordering a one-piece cable and connector product to your exact specs.

3M's broader line now includes off-the-shelf and customized connectors that eliminate wasted design time by providing you with the connectors that fit your specs, whether they're standard or special.

Our wide range of molded cable assemblies features cable and contacts integrally molded, forming a one-piece interconnect system with built-in strain-relief. Design integrity is compromised when you can't get the right IC sockets from one source. With 3M Textool™ products, you're covered.

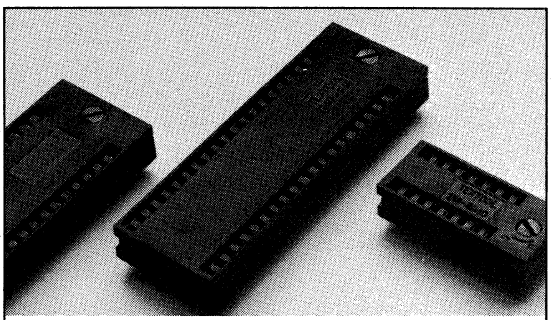
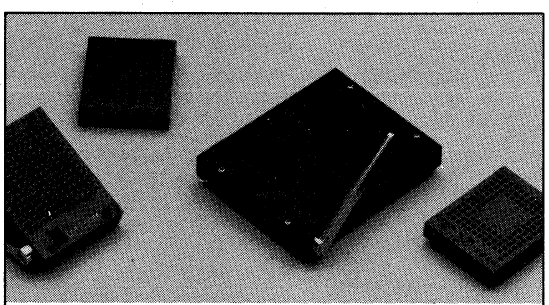
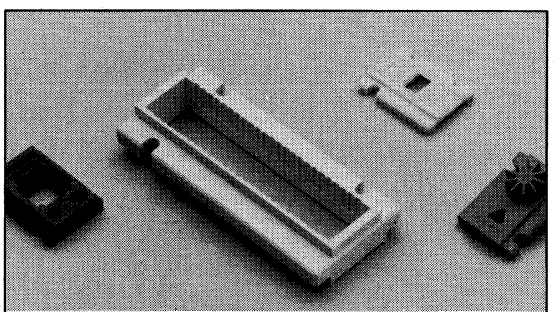
End-use 68-lead chip carrier sockets accept JEDEC leadless type A packages with .100" x .100" pin patterns.



Econo-Zip® end-use DIP sockets accept a wide range of pin counts, from 14 to 64 pins, increasing your products' flexibility.



Pin grid array sockets, for test, burn-in and end-use applications, feature matrix sizes to 21 x 21 to accept high density VLSI packages.



One- and 2-piece carriers protect delicate ICs during automated assembly and testing of all package types.

3M makes it easy to get the right IC sockets for your needs with our selection of Textool designs for test, burn-in and end-use applications. Socket types include chip carriers, flat packs, pin grid arrays, DIPs and discrete components in a variety of body, contact and plating materials.

Econo-Zip end-use DIP sockets are designed for applications requiring field replacement or reprogramming of packages: PROM, EPROM, mobile telephones, PABX equipment, programmable auto horns, robotics and more.

The patented Zip® (Zero Insertion Pressure) feature on our pin grid array and Econo-Zip sockets protects expensive leads from damage. The low profile and durable leads of our chip carrier sockets make them ideal for high volume production applications.

We also offer 1 and 2-piece IC carriers useful in automated assembly and testing. Special anti-static materials protect ICs during handling.

M.C.I. has the world's largest inventory of filtered D-Subminiature connectors. These connectors are manufactured by the leader of the industry... Spectrum Control, Inc. Spectrum Control's Filtered D Subminiature connectors are designed to provide a cost effective method of complying with FCC Part 15, Sub Part J, VDE and MIL STD 461 A/B regulations. The filters are feed-thru capacitors and pi sections.

Our in-house stock includes all five shell sizes, 9, 15, 25, 37 and 50 position connectors in pin contacts (plugs), socket contacts (receptacles) and in the very versatile pin/socket adaptors. The four standard electrical configurations along with their performance values follows:

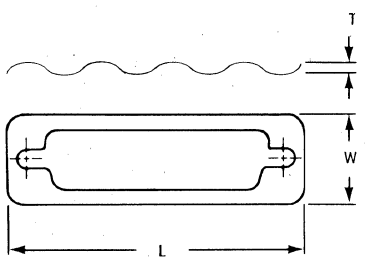
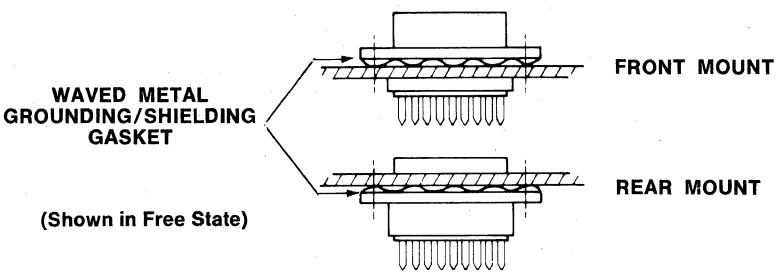
Mounting Considerations Waved Metal Gaskets...For Complete EMI Protection

Proper mounting of any EMI filter — including the EMI filtered D Subminiature — is critical to the achievement of electromagnetic compatibility. The mounting surface for grounding the connector must be free from paint or any other insulating material. The sketches below indicate the use of one of Spectrum's EMI gaskets to fill any tolerance gaps and adjust for irregularities in the flatness of the mounting surface.





Shell Size	Mounting Configuration	L	W	T Free State	T Compressed	Part No.
25	Front - Socket	2.088 (53,04)	.600 (15,24)	.030 (0,76)	.005 (0,13)	572019-00102-70
	Rear - Pin

Spectrum EMI Filtered D Subminiature...Unique

Spectrum D subminiature connectors feature a unique ground plane to effectively block bulkhead leakage of EMI. The design also provides line to line isolation separation to limit cross talk (line to line mutual coupling) to an absolute minimum. Another, and a most important feature, is the coaxial spring contact that provides proper electrical grounding when mating one connector to another connector.

Honda Connectors

PCS Series (Micro-D) Board-to-Cable

PCS board-to-cable connectors condense input to one-half the space of conventional D-subminiature connectors. They have a .050 in. center spacing that makes use of 28 and 30 AWG, .050 in. center cable. PCS connectors are designed to prevent EMI and facilitate product compliance with FCC standards. IDC configuration significantly reduces wiring time. Zinc die cast receptacle shells provide additional noise reduction. Available unassembled or as custom cable assemblies in 20 to 80 contacts.

TC Series (Chip Carrier Sockets)

TC Series Chip Carrier Sockets are mounted on the same footprint as the chip packages they carry. Even if the board was designed for direct chip application, TC Series provides the perfect interface for trouble-free surface mount. Special structure allows the socket to conform to pin spacing deviations of the chip carrier package. Closed bottom version requires no cleaning since solder can't reach contact surfaces. Open bottom version has wide spaces between insulation and PCB for easy cleaning. TC Series accepts JEDEC Types B, C and D plastic leaded chip carrier packages of 20 to 84 contacts with .050 pin spacing.

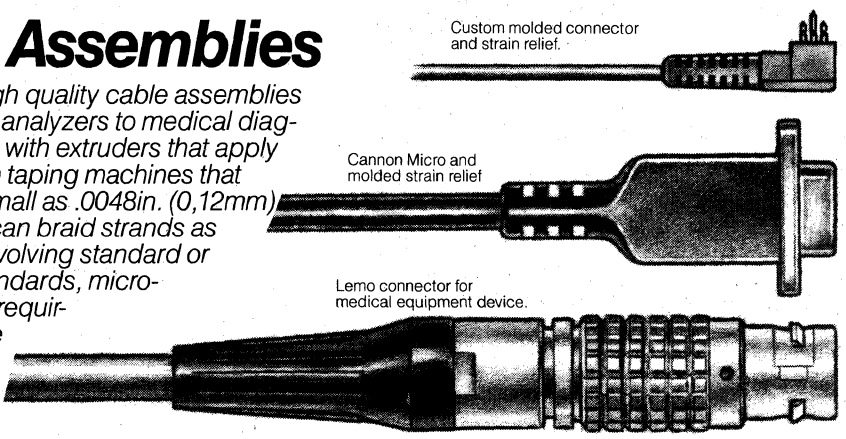
MICRO INTERCONNECTIONS

National Electric Cable designs, tests, produces, and improves cables, connectors and complete cable assemblies for specific applications in instrumentation and medical electronics. Our experience has taught us that advanced cable technology not only influences system design but frequently determines whether a system is functionally and economically viable and reliable. We are the leading U.S. manufacturer of micro-miniature cable assemblies and have successfully supplied companies like General Electric Medical Systems, Hewlett-Packard, Tektronix, and Phillips.

Electronic Cable Assemblies

We design and produce exceptionally high quality cable assemblies for high tech products ranging from logic analyzers to medical diagnostic machines. We manufacture cables with extruders that apply insulation as thin as .002in. (0,05mm) with taping machines that apply low density materials on wires as small as .0048in. (0,12mm) in diameter, with braiding machines that can braid strands as small as .002in. (0,05mm). Assemblies involving standard or molded connectors, stringent military standards, micro-miniature soldering and other processes requiring automated termination techniques are typical of the ongoing projects in our new manufacturing facility. Tell us your needs and we will build you a prototype.



Cables & Connectors

If you are designing electronic equipment using hand-held devices or high speed data transmission, let us show you ways to improve miniaturization, flexibility, flex life, abrasion resistance, shielding, capacitance, specific impedance and other critical cable requirements. Think of us as an extension of your design department for the latest in cable technology.

We usually terminate our cables to connectors like Cannon Micro-D and ZIF, Fischer, Lemo, Amp CPC's and Coaxicon, Berg Mini PV, SMA and SMB, Selectro Nanohex and military circulars. We also design and build custom connectors involving various moldings and strain reliefs in our cable assembly plant, where automated crimping is done to 36 AWG and precision soldering to 40 AWG.

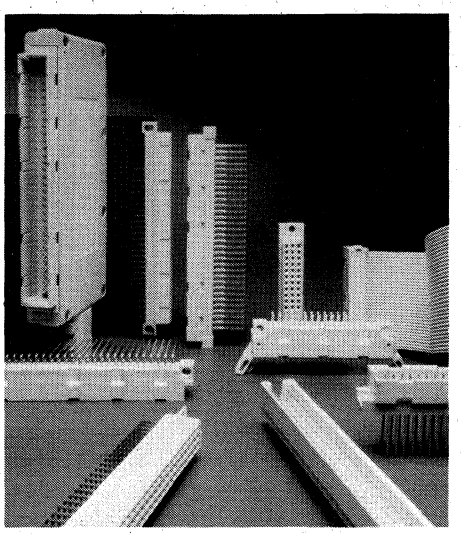
PANDUIT® HI-CON™ | EUROCARD DIN CONNECTORS

Performance rated to meet all your specific application requirements with maximum cost effectiveness. Standard DIN .100″ contact grid. Designed to meet DIN 41612; MIL-C-55302/131, /132, /133, /134; BS 9525 F0004; IEC 603-2; and VG 95324 specifications. Series 100 compatible with VMEbus P1/P2 or J1/J2 applications and Multibus II packaging.



An Evolving Connector Standard

New technology and applications have required a continuing evolution of original DIN 41612 product selections. A recent addition of DIN 41612 is the introduction of "Performance Levels I, II and III." These levels establish testing conditions after which connectors must still meet minimum performance standards. The chart below describes one of the most often referenced test procedures, in which connectors are subjected to a number of mating cycles, exposed to a harsh environment for a period of days, then subjected to more mating cycles.

The performance level can now be specified in lieu of a costly gold specification. This is an important design concept, allowing for the most cost effective purchase.

Performance Level	Test Conditions per DIN			Total Mating Cycles Per Panduit Spec.
	Mating Cycles	Environ. Test	Mating Cycles	
I	250	21 days	250	250 + 250
II	200	4 days	200	200 + 200
III	50	0		200

EEM MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

INTERNATIONAL Primary Power Connectors

Use of a primary power connector and cordset instead of a permanently installed power supply cord makes it possible for the equipment user to easily replace a cordset if it is damaged. It also makes it very easy and economical for the equipment manufacturer to supply the correct cordset for a foreign client because cordsets with a molded IEC-320/CEE-22 primary power connector are available with virtually any of the world's power plugs installed on the other end.

The IEC-320/CEE-22 connector is by far the most commonly used 3-wire (grounded) primary power connector in North American and Europe, It is also used in Australia and Japan as well as major developing countries.

The connector illustrated at right is the most widely used of the IEC-320/CEE-22 types. Rated for use at 65°C.

The connector at right has a polarizing key which prevents insertion of "cool" cord connector above. Rated for use at 120°C.

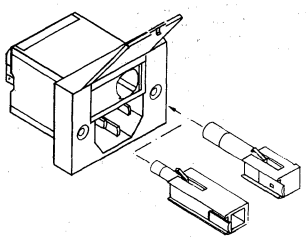
INTERNATIONAL COMBICON™



The International Combicon™ combines two functions: a universal IEC 320 AC power connector and a fuseholder which accepts **either** the North American standard ¼ x 1¼ inch fuse or the international 5 x 20 mm fuse. The Combicon makes it easy to adapt your product to any major North American or international wall plug and fuse requirement.

Interpower™ INTERNATIONAL Socket Strip

The Interpower™ International Socket Strip incorporates seven of the world's primary socket standards in one device. Use it in burn-in racks or test labs where products with international cords or cordsets are being prepared for export. Or, use it for receiving inspection on international cords and cordsets.

These sockets are included: "Schuko" German, Danish, Italian, India, South African, Swiss, Australia/New Zealand, and British. Table and rack mounting styles are available.

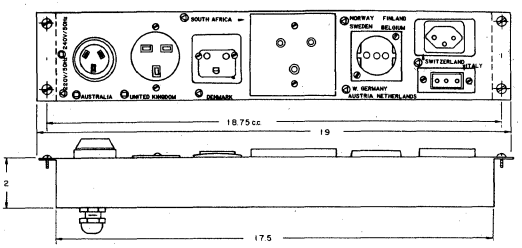
Rack Mounting Model
P/N 85010110



Also see our "International Power Supply" with outputs from 100-250V at 50/60 Hz in EEM section 4050.

Installation to Power Source:

The International Socket Strip is equipped with two unterminated power cords – one for connection to a 220VAC/50Hz power source; the other to a 240VAC/50Hz power source. The conductor size is 1.5 mm² which is slightly larger than 16 AWG (16 AWG = 1.23 mm²). Each cord is 2.5 meters long and clearly marked as to voltage. The jacket and primary insulation are stripped and ready for installation to the appropriate power source. The primary insulation is color coded in accordance with international standards: green/yellow ground; brown (line); blue (neutral).

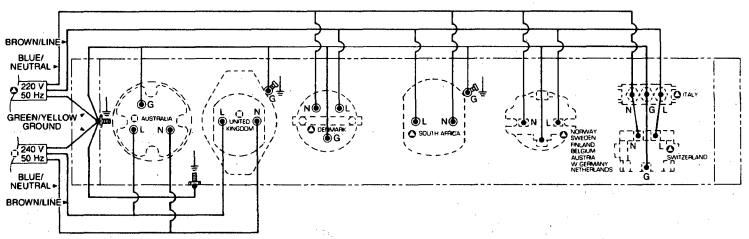
Internal Wiring

220VAC/50 Hz circuit
The cord marked "220VAC/50Hz" supplies power to these sockets:

Socket standard	Socket rating
"Schuko" (German)	16A
Danish	10A
Italian	10A
India/South African	16A
Swiss	10A

240VAC/50Hz circuit
The cord marked "240VAC/50Hz" supplies power to these sockets:

Socket standard	Socket rating
Australia/New Zealand	10A
United Kingdom	13A



Each circuit is rated at 16 amps maximum for all of the sockets combined.

Testing

In addition to visual inspection at all manufacturing stages, each socket of both circuits is checked for correct polarity and continuity. The entire socket strip is then hi-pot tested at 2500 VAC; this test is done on each circuit between ground and line and neutral shorted together.

Delivery: Usually available from stock; call PCC Customer Service Department for stock level.

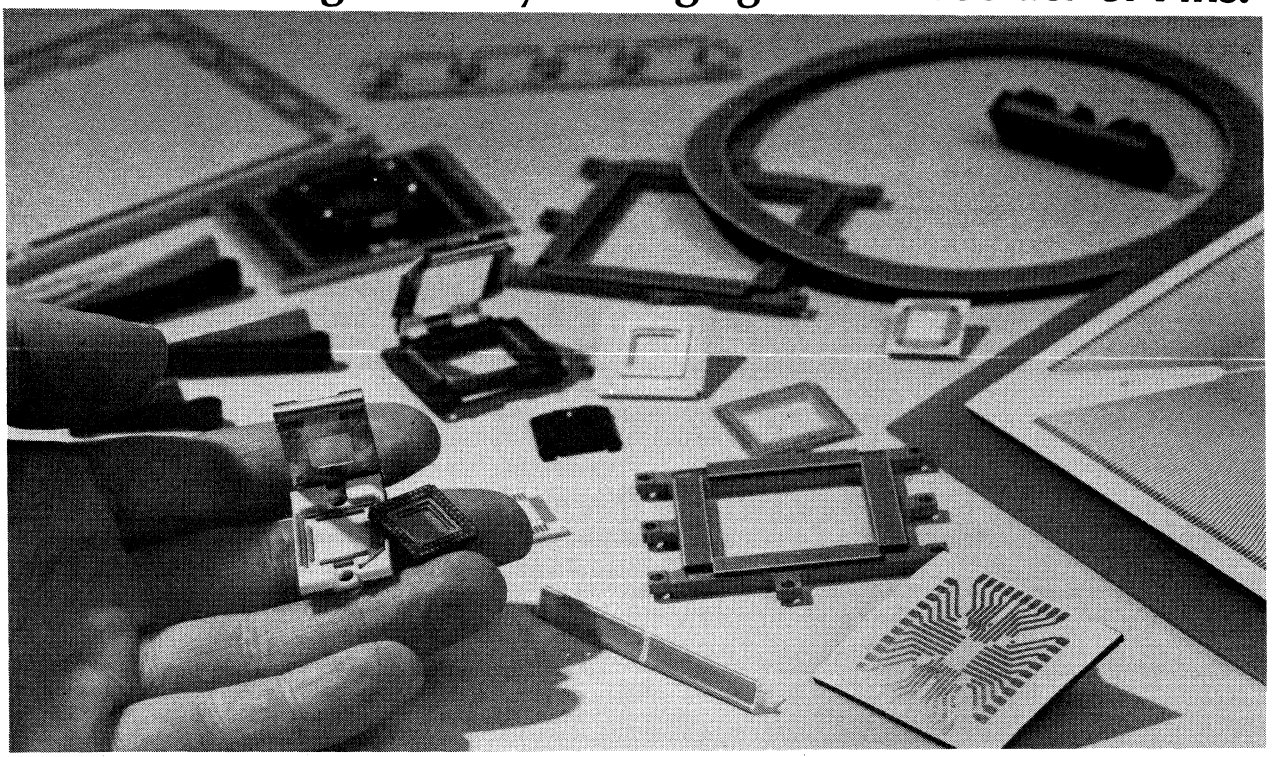
ENGINEERED SOLUTIONS

For *Reliable* High Density Packaging Without *Solder* or *Pins!*



Elastomeric Connectors From PCK For:

- ☐ **Surface Mount Compatibility**
- ☐ **High Contact Density**
- ☐ **Remateability**
- ☐ **Environmental Contact Sealing**
- ☐ **Low Profile Board Spacing**
- ☐ **High Speed Compatibility**

High density packaging without solder or pins...sounds almost too good to be true, but in fact, it's something we've been doing for many years. At PCK Elastomerics, we make it possible through the use of elastomeric connectors which have proven, long-term reliability in a variety of applications. Our technology enables us to design unique interconnection systems that solve a wide range of packaging problems, such as connections for board-to-board, chip carrier sockets, test fixtures, flat-panel displays, etc.

Elastomeric connector elements are available in two types; STAX and MOEs (Metal On Elastomers). STAX are composed of alternating layers of conductive and non-conductive silicone rubber. Silver is used as the conductive material where low resistance contact is desired, while carbon is used for higher resistance contact to liquid crystal displays. MOEs have metal traces deposited on a silicone substrate, providing either redundant or dedicated paths for low resistance connection.

STAX and MOEs create reliable contact when clamped between closely spaced pads on mated substrates. Gas tight seals exclude harsh environments over a wide temperature range. Silicone rubber's superior electrical properties ensure low capacitance and dielectric loss over the entire temperature range at up to 100% relative humidity.

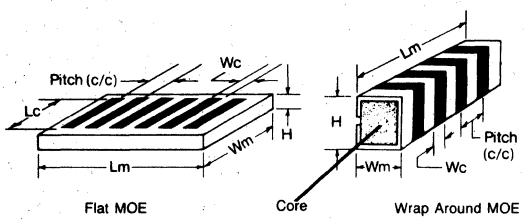
MOE (METAL-ON-ELASTOMER) Elastomeric Connectors



Metal-on-elastomer connectors, or MOEs, are gaining widespread use in electronics packaging and test by providing high density, remateable connections with gold contacts. They allow easy installation and quick access, while providing a long life of gas-tight contact.

MOEs consist of metallic conducting paths laminated to electrically insulating elastomers, usually silicone. These conductive paths of gold on nickel on copper are artwork generated patterns facilitating microstrip designs.

MOEs are available with as many as 125 lines per inch (.004" lines on .008" centers), for redundant contacts or very accurate one-to-one contacts on wider centers.

Contact the applications engineering department of PCK Elastomerics for connector design assistance.

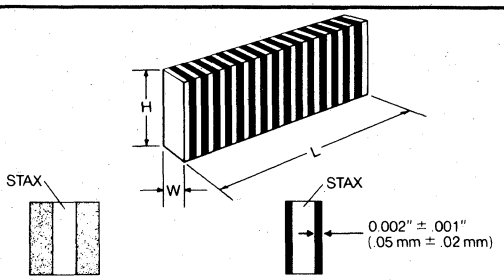
Silver Stax
ELASTOMERIC CONNECTORS

Silver STAX are low resistance connectors with contact resistances down to 100 milliohms. They consist of silver impregnated layers of silicone which are separated by nonconductive silicone layers. The silver material is an integral part of the STAX and is not susceptible to silver migration. STAX are typically inserted between two surfaces to be connected and clamped in position with a lid or matching surface. When deflected 5% to 20% STAX conform to contact surfaces to create gas-tight seals.



Details show foam padding (left), and insulation (right), each available on one or both sides. Configurations may also include foam on one side and insulation on the other.

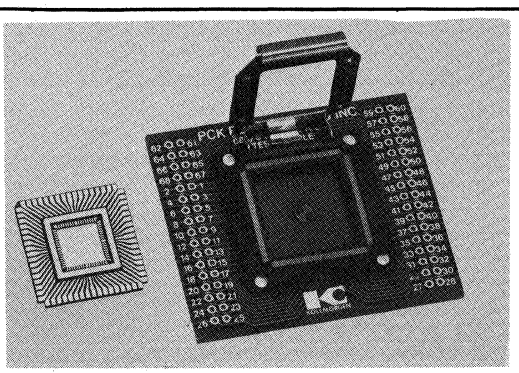
Humidity range: 85% @ 85°C for 96 hrs.



LET US DESIGN AN ELASTOMERIC INTERCONNECTION SYSTEM FOR ALL YOUR PACKAGING NEEDS

Here are some typical applications

☐ Board-to-Board

Board interconnection is easy with elastomeric connectors. The STAX and MOEs provide redundant connections when compressed between surface contact pads as tightly spaced as .025" center-to-center. We can design and provide an entire connection system including holders, hardware, and board layout. STAX and MOEs make it easy and cost effective.

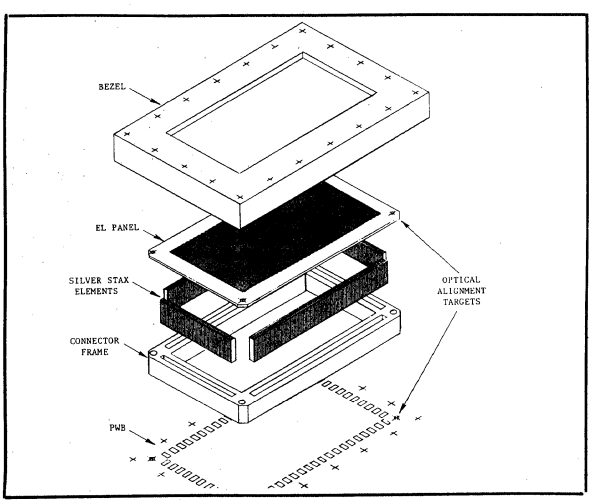
Typical coplanar connection

Typical right angle connection

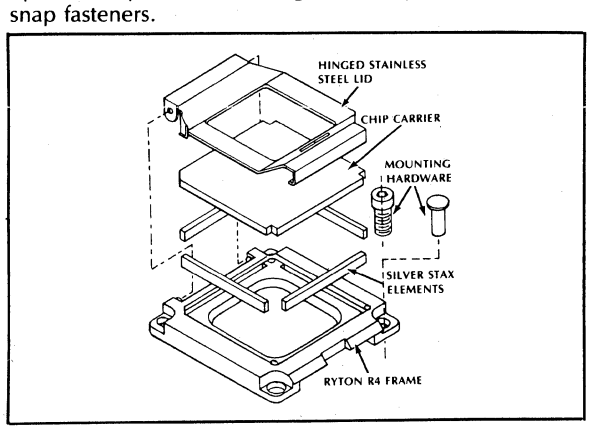
☐ Flat Panel Displays

Elastomeric Connectors provide redundant connections to tightly spaced pads on Electroluminescent, Plasma, Liquid Crystal, LED, and other displays while sealing out contaminates and making alignment less critical.



☐ Chip Carrier Sockets

By eliminating soldering and plated through-holes, leadless chip carrier sockets that use STAX or MOEs simplify assembly and replacement, while saving considerable board real estate. The use of Silver STAX also allows very low profile packages. Lead lengths can be shortened to reduce inductance for high speed compatability. Several mounting options are possible including screws, eyelets, rivets, and snap fasteners.



☐ Test Fixtures

MOEs maintain low resistance, repeatable connections through a broad temperature range, making them ideal for test applications. Since their patterns are artwork generated, they are readily adaptable to a wide variety of devices and substrates such as hybrids, chip carriers, etc. Below are just some of the types of patterns used in test applications. Let the Applications Engineering Department at PCK Elastomerics show you how to use MOE's for your testing requirements.

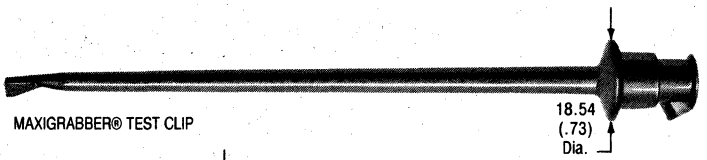
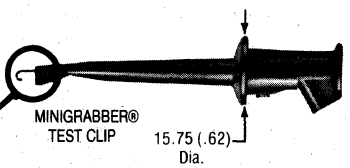
GRABBER TEST CLIPS

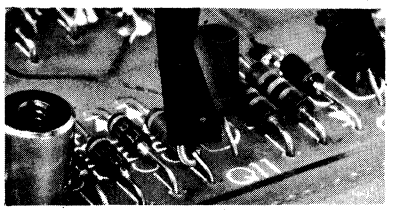
These plunger type action test clips are called Grabber test clips. The gold plated contact hook attaches rapidly to component leads and terminals. The specially designed tip (see illustration) slides easily on the 0.64 mm (.025) square wrapped wire terminals. The do-it-yourself Grabber test clips can be assembled quickly and easily by the user (see simplified instructions below). Grabber test clips can also be purchased as completed patch cords that are firmly molded together to provide a strong, reliable and integral unit.

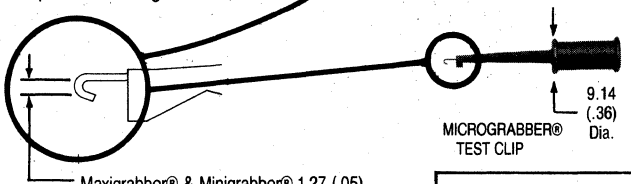
FEATURES:

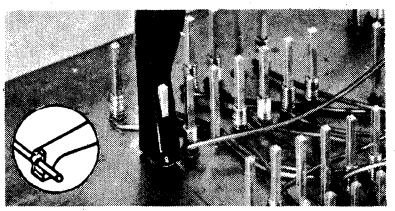
- Plunger type action between thumb and two fingers.
- Comfortable finger grip operation.
- Positive connection that won't pop off.
- No sharp teeth to damage or nick wires.

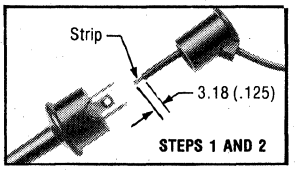












SIMPLIFIED ASSEMBLY PROCEDURE FOR DO-IT-YOURSELF GRABBER TEST CLIPS

1. Pull off thumb cap to expose contact connection.
2. Thread wire through thumb cap and strip 2.18 mm (.125).
3. Insert stripped end through tapered hole on contact, and solder.
   NOTE: Stripped end should be placed into the large opening of the tapered hole.
4. Slide thumb cap back onto contact.

ANTISTATIC DIP REMOVERS

These DIP removers are built of special plastic that not only has the strength to pull the most stubborn DIP, but actually prevents electrostatic buildup. The surface resistivity controls surface charges and protects even the most sensitive of electronic circuits. This excellent design also minimizes accidental bending of contacts.

- **MATERIAL:** Antistatic Noryl.
- **TEMPERATURE:** Heat distortion temperature @ 265 psi greater than +93°C. (+200°F.)

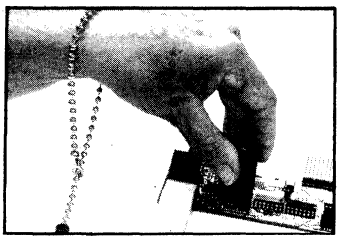
ANTISTATIC WRIST STRAPS

These personnel grounding wrist straps protect even the most sensitive IC from accidental damage due to static electricity. The self-adjusting wrist strap (see insert) allows freedom of movement, yet is attractive and comfortable to wear. All units feature a built-in 1 megohm resistor.



REPLACEMENT WRIST STRAP

Leave the antistatic cord permanently attached to the bench and give each of your assemblers their own wrist strap. You can also use this model to replace those straps that were lost, without purchasing an entire assembly. Fits Models 5027 and 5028.

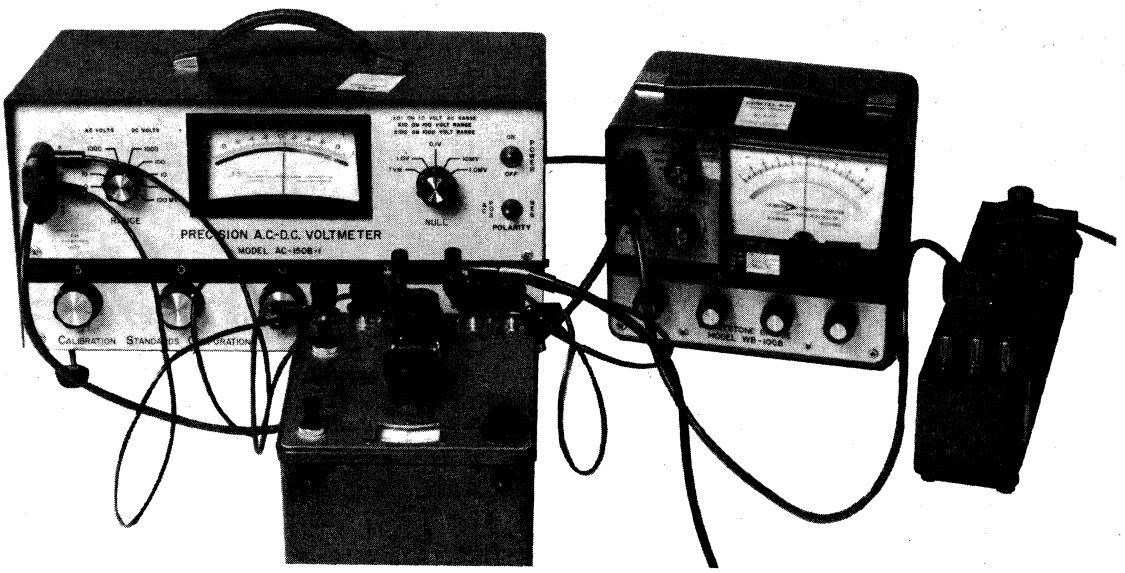
LOW THERMAL E.M.F. SPADE LUG JUMPERS



HIGH CONDUCTIVITY ETP COPPER, ALLOW 110 LEADS FOR PRECISION MEASUREMENTS

Pomona Electronics offers products for use in measurements when thermoelectric effects are significant sources of error. Comparators designed for use with the Kelvin-Varley voltage divider and microvolt leads were tested with primary standards laboratory equipment.

Thermoelectric voltages were not detected until the most sensitive galvanometer range was used.

Thermoelectric properties — High Conductivity ETP Copper, Alloy 110 gold plated spade lugs cold-staked to multi-stranded 12 gauge copper wire minimize thermoelectric effects — an absolute necessity for low voltage, high precision measurements.

Low resistance — 12 gauge multi-stranded copper wire results in extremely low cable resistance. Spade lugs plated with 15 micro inches gold for minimum contact resistance and minimum thermal EMF when using copper binding posts (less than 0.01 μV/°C).

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Power Dynamics IEC Connectors have been submitted, tested and approved by most recognized National Testing Agencies. These prior approvals eliminate the necessity of a retesting program when submitted in equipment being evaluated by these same testing agencies.

Our IEC Connectors which conform to CEE-22 are accepted throughout the world for use in electrical equipment. Designers and manufacturers are offered maximum flexibility as PDI Connectors mate with all universally accepted CEE-22 Power Cords. PDI offers a complete selection of Power Cords. Equipment which incorporates PDI Connectors also offers the further advantage of shipping finished units with correct cord set, permitting immediate use without time consuming modifications on the part of the end customer.

****GENERAL NOTES ABOUT PRECICONTACT SOCKETS***
Low profile Precicontact sockets are designed to meet MIL-S-83734. All socket assemblies (except Series LSO) feature four-leaf inner contact springs assembled into closed-entry, machined sockets that accept short IC leads. Inner contacts are BeCu, gold over nickel per MIL-S-45204; outer sleeves are brass, gold-over-nickel, or tin-plated. Standard insulator material is thermoplastic polyester, UL-rated 94V-O, except where noted. Contact design eliminates solder or flux wicking problems.

DIN CIRCULAR CONNECTORS

Preh circular DIN connectors are rugged, miniaturized connectors designed to provide reliable interconnections to peripheral equipment, test and measurement instrumentation, medical equipment, control devices, etc. Originally designed for audio applications they range from 3 to 8 contacts per connector at operating power up to 3A/34V. Preh connectors are available in nickel plated die cast Zinc alloy bodies for applications requiring durability and also in plastic bodies where durability is not a problem. Insert material is molded phenolic. Female "tuning fork" type contacts are silver plated while male pins are tinned. Connectors and contacts can be custom plated to customer specification.

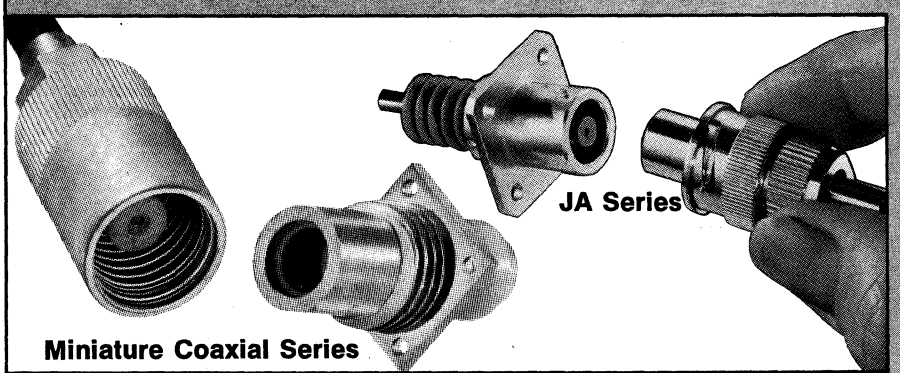
FOR YOUR COMMERCIAL, INDUSTRIAL OR MILITARY DESIGN NEEDS



Rowe Miniature Coaxial Connectors and Cable Assemblies

Employ the same high-voltage design techniques as the coaxial series, but are much smaller in size for use in restricted spaces. Available in quick disconnect and screw couplings (the JA Series can be adapted to such standard type cables as RG 58 and RG 59).

Rowe Subminiature Coaxial Connectors and Cable Assemblies

Are ideally suited for use where space is at a premium. Employing the traditional Rowe high capability features, the subminiature sizes offer unusually high voltage operating capabilities, through 20 KV.

Rowe Low-Voltage, Molded-On Connectors and Cable Assemblies

For use in severe environments. We can mold your STD connectors to cable for an environmental seal and provide a molded strain relief. Our exclusive Insta-Change series was designed for factory, mining, nuclear and oil well use.

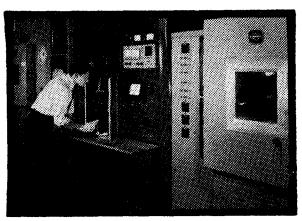
Life testing facilities.

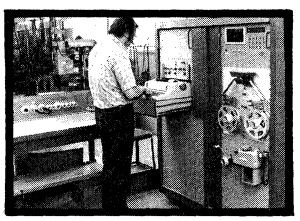
High altitude pressure chamber.

RFI-EMI-EMP test chamber.

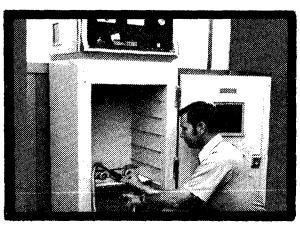
High voltage, corona and dielectric test chamber.



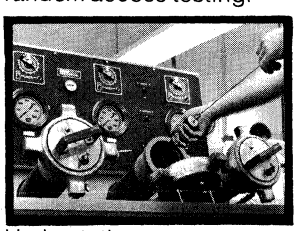
Humidity chamber.



DIT-MCO computerized random access testing.



X-Ray equipment.



Hydrostatic pressure testing.

We're specialists in complete interconnection systems and, in particular, connectors and cable assemblies for extreme environments and unique applications. In fact, we've designed and manufactured hundreds of different connectors and cable assemblies for nuclear instrumentation and control, high voltage, corona-free thru 200 KV+, underwater instrumentation, geophysical, high and low temperatures, corrosive environments, high altitude and deep space, high and low pressures and other sophisticated military and industrial systems.

Rowe engineers design and specify custom products to meet exacting requirements and Rowe craftsmen produce them to the highest quality standards. In addition, we operate one of the most complete testing facilities in the industry. Our destructive and non-destructive testing capability includes:

Electrical Testing
Dielectric strength, corona measurement, RFI/EMI and DIT-MCO computer controlled circuit testing.

Mechanical and Physical Testing
Plating verification thru microscopic analysis, shock and vibration, hydrostatic pressure and helium leak, tensile strength,contact force measurement, optical comparitor equipment, complete x-ray lab.

Environmental Testing
Altitude thru 150,000 feet, temperature, humidity, corrosive atmospheres, accelerated life combining various conditions simultaneously.

Quality Control
Rowe's quality control and inspection systems meet or exceed MIL-Q-9858, ISR-1, NRC's 10CFR50 appendix B and standards of all aerospace and industrial firms.

With so many interconnections to choose from, chances are that we've already developed the one that meets your needs. If not, we'll custom design one for you.

HHSmith. Your exclusive connection for Neutrik® precision connectors.

Today's sophisticated audio and industrial componentry is only as good as what links it all together. And it never gets as good as Neutrik brand precision engineered connectors, only from HHSmith. Advanced interconnects that receive a level of design attention usually reserved for the finest electronic circuitry.

Take our XLR straight and right angle connectors for example. Alloy gold and silver plated contacts for ease of signal flow. Hard polyester inserts, fiberglass reinforced for extra strength. A chuck type clamp for secure strain relief without damage to insulation. And a high reliability die-cast zinc shell, finished in satin nickel or black chrome.

Or our XLR receptacles with gold or silver plated brass pins, beryllium copper contacts and easy 2-screw mounting.

There's even an X series 3 pin male/female connection system that saves you up to 50% in assembly time. Or our same-size male/female "D" series receptacles with PC board or solder spring selection, and receptacle inserts that lock in and out for repair without shell removal.

All examples of truly precision engineering and craftmanship. The kind that makes itself evident in every Neutrik product, including AC connectors and receptacles, phone jacks, plugs, goosenecks and transformers.

SPECTRUM EMI FILTERED D SUBMINIATURE CONNECTORS...

Spectrum's distributor stocked filtered connector product line is described in detail over the next few pages. All dimensions are shown in inches (metric equivalents in millimeters are in parenthesis). Decimal tolerances, unless otherwise specified, are ± .015. All electrical engagement areas (plug and receptacle) are gold plated copper alloy. All terminations (printed circuit board right angle, solderless wire wrap and solder cup) are solderable. Housing (shells) are a corrosion-resistant non-ferrous alloy. Insulators and right angle brackets are UL rated 94 V-O. Radio frequency ground contact from the connector housing (shell) to the mating connector is assured by a patented coaxial spring clip on the pin side of the plug, the socket side of the receptacle and both pin and socket sides of the adapter. EMI filter types specified are either Pi-Section (Pi) or Feed-through (FT).

EMI FILTER PERFORMANCE

The performance indicated in the table below is obtained when the connector is mounted with a suitable grounding gasket (page 6) and measurements are made in accordance with MIL-STD-220 (no load).

When mounted using the recommended panel cut-out (page 6) but without a grounding gasket the insertion loss versus frequency curves will level out between 50 and 60 dB.

Filter Designation	*Filter Circuits	Capacitance Value	Capacitance Tolerance	3 dB Max Cut-Off Frequency (MHz)	Dielectric W'Standing Voltage	Rate DC Current	Contact Resist. **For cost-effective applications; features the latest state-of-the-art ceramic technology and a unique feed-through design.

PULSE PERFORMANCE

As an application guide this table lists the 3dB max cut-off frequency for each of the filter types. The repetition rate for good and marginal signal pulse performance is also included.

The frequencies are derived for source and load resistance of 50 ohms. Actual cut-off frequencies (and therefore pulse performance) will depend on the impedances encountered in the particular circuitry.

$$F_c = \frac{R_S + R_L}{2\pi\ R_S R_L (C_F + C_C)}$$

Where R_S and R_L are the source and load resistances respectively, C_F is the filter capacitance and C_C is the associated circuit capacitance.

Type	Cut-off Frequency (MHz)	Signal Pulse Performance (MHz) Good	Marginal
A	17	3.4	8.5
F	6.4	1.7	3.2
C	3.2	0.64	1.6

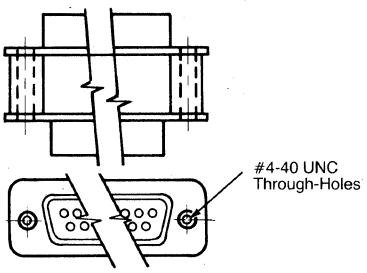
MOUNTING OPTIONS

Spectrum offers fastening options for ease in mounting which include an integrally designed spacer or a separate hexagonal spacer. Also available are threaded self-locking inserts and grounding brackets.

SPACERS

Integral Spacer

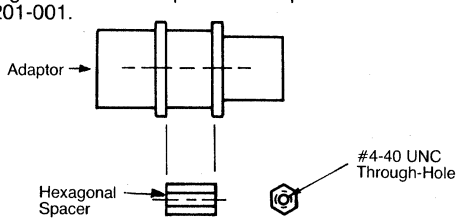
Incorporates drilled and tapped #4-40 UNC through-holes as an integral part of the adapter housing design. Fastens to mating connector from either direction. Eliminates need for threaded spacer mounts or inserts.



IN STOCK

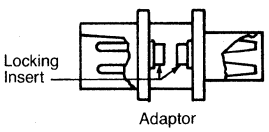
Hexagonal Spacer

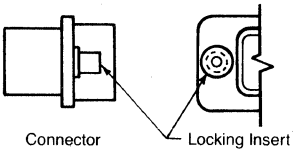
Tapped spacer easily inserts between flanges of standard Spectrum adaptors for ease in mounting. Available separately (two required per adaptor) order Part No. 56-201-001.



THREADED SELF-LOCKING INSERTS

Self-locking, threaded and soldered #4-40 UNC inserts, available for all connectors and adaptors. Allows ease in fastening and mounting from pin or socket side. Must be ordered with connector. (Add "LI" to part number when ordering)





GROUNDING BRACKET

Provides grounding connection between connector mounting-flange and the printed circuit board. Also provides grounding for non-grounded PC boards. Fits all Spectrum shell (housing) sizes. (Add "GB" to part number when ordering)

Proper mounting of any EMI filter — including the EMI filtered D Subminiature — is critical to the achievement of electromagnetic compatibility. The mounting surface for grounding the connector must be free from paint or any other insulating material. The sketches above indicate the use of one of Spectrum's EMI gaskets to fill any tolerance gaps and adjust for irregularities in the flatness of the mounting surface.

Spectrum Control fabricates a full line of gasket and shielding materials for EMI purposes, as well as environmental needs. Indicate front or rear mounting by part number described above.

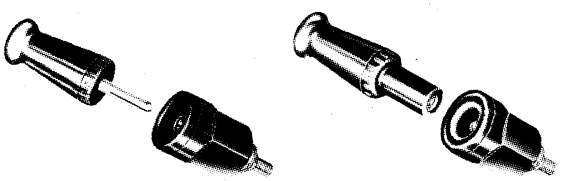
ELECTRICAL CONNECTORS



Nylon plastic parts; gold-plated brass current-carrying parts. Wiring connections to the same plug can be either soldered or solderless. Plug cable-fastening screws permit a wide range of cable sizes. Plug grips are of a simple, two-piece threaded construction for quick assembly. All receptacle plastic parts are molded of the same color to permit more rapid and accurate circuit identification front and back of panel when installed. The 25, 50 and 100 ampere types are listed by Underwriters' Laboratories, Inc. In red, black, white, blue, green or yellow.

5-way™

TEST PROBES

For test connections to PC boards and other electronic components. Design allows connections by hooking onto component leads or by plugging into Superior Electric 207146-001-JB terminals or others having 0.080" diameter receptacles. For plug-in, conductor holds firmly to inside of receptacle under spring tension. When used for hook-on, probe clamps to component lead or wire wrapping pin with approximately 16 oz. force. Conductor beryllium copper tempered to spring hardness. Insulating parts durable nylon plastic capable of withstanding 250°F without deforming. Available in red, black, white, blue, green or yellow.

"Q-G" AUDIO CONNECTORS WITH COMPLETE GROUNDING PROVISIONS!

Switchcraft "Quick-Ground" connectors feature a separate "Ground-Terminal" electrically integral with connector shell. Ground continuity between mating plugs automatically accomplished through exclusive "Ground Contactors". Possible loss of insert screw is eliminated by new "Captive-Design" insert screw. Socket and pin assemblies utilize "wedge-action" to insure firm, reliable positioning in connector shell. Inserts are easily removable for wiring & soldering. High impact thermosetting plastic material insures long reliable insert assy. life. Female connectors have latch lock feature to hold connectors firmly together. Plugs and receptacle mechanically keyed for proper mating. "Q-G" (*) Series 3-, 4-, 5-, 6-, and 7-pin/contact connectors offer 4-, 5-, 6-, 7-, & 8-pin contact versatility when "Ground-Terminal" is used. Used interchangeably with Switchcraft QGP connectors (page 41): 3- and 4-contact (Amphenol 91-850 and Excellite 91-450 Series, and Cannon XLR-3, XLR-4): 5-contact (Cannon XLR-5 and Amphenol Excellite 91-450 Series).

Cord plug part no. suffix "L" indicates strain relief accepts cables from .25 in. (6.35 mm) to .328 in. (8.33 mm) dia.; other plugs accept cables up to .25 in. (6.35 mm) dia. (*) Number of insert contacts or pins must be specified to complete part number.

Part number with suffix "B" indicates cord plug with "Black-Velvet" black finish (minimizes glare and permits stable "through-connector" shielding). Suffix "D" indicates type with "FAS-DISCONNECT" detent feature. U.S. Patent 3,219,961; Canadian Patent No. 761,114 (June 13, 1967)

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Double Row Terminal Blocks

Double row terminal blocks are among the most widely used and accepted devices for terminating wires because of their versatility and cost effectiveness—both in initial and installed cost. Simple installation requires only a screwdriver, so time-consuming splicing is eliminated.

All USD Double Row Terminal Blocks are molded from 94 VO polyester material rated at 155°C, and are UL and CSA recognized. USD terminal blocks have a general industrial rating when used with screws or pressure plate connectors, and a commercial rating when used with insulated female Quick Connect terminals.

- Specific identification for fast production wiring.
- Complete assembly, with internal circuitry to suit your requirements.
- Kit availability to match your production models exactly.
- Easy assembly of laboratory or experimental kit-form models.

125 Volts

The most flexible unit for terminal arrangements. Terminals can be arranged in any combination if there are two or more common terminals per group of terminals.

250 Volts

Terminal arrangements in these units are more restrictive because of the clearances required. Specific requirements are either:

1. All terminals in the same row can be common.
2. A row can be split into two or more groups of common terminals, provided there are two or more common terminals per group. A blank terminal slot must separate any in-line terminal group.

Note: A. The blank terminal slot between in-line groups of common terminals produces the clearance required for the 250 Volt rating.

B. A row is the column of terminal slots which form a straight line along the center-line that passes through the long dimension of the terminal slot.

Phantom view shows position of terminals when mounted in block with wire connectors fastened. Each terminal is insulated from all other surrounding terminals or connectors. The back plate insulates the male terminals from the surface on which the block is mounted and also holds terminals in place.

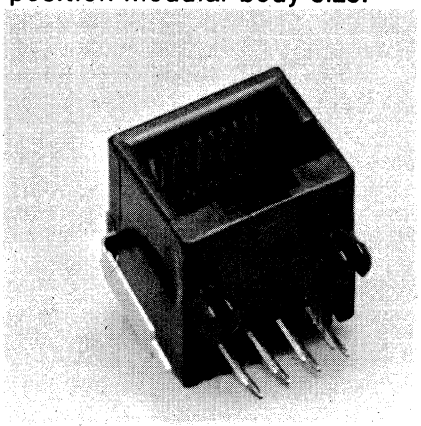
NEW V.P. PRODUCTS

•Low profile female PCB connectors with external ground strap. Ground positions can be 1, 2, 3. Available as a 8-10 or a 6-8 size.
•Ultra-flexible flat shielded cable because of unique shielding method.
•Low profile 6-8 female PCB connector designed to minimize PCB board spacing. PCB can be spaced as close as ½". Designed to handle 8 active lines with standard 6 position housing.
•6-8 male plug, standard 6 position modular plug body size which can have up to 8 active lines.
•Unique double shielded construction over the conductor bundle that provides very high levels of signal emissions of high speed transmission.
•8-10 male plug, standard 8 position modular plug body size which can have up to 10 active lines.
•Low profile 8-10 female PCB connector designed to minimize printed circuit board spacing.
•P.C.B. can be spaced as close as ½". Designed to handle 10 active lines with standard 8 position modular body size.



GROUND STRAP LOW PROFILE

An innovative concept for modular grounding systems is the Virginia Plastics' low profile PCB connector with internal contact/external ground strap. The ground strap uses a large surface area to efficiently drain emissions. Ground strap connections bypass PC traces by directly going to the ground plane, reducing EMI emissions.

FEATURES:

•Housing is made from high temperature thermoplastic with a flammability rating of 94V-O
•Fits printed circuit board grids of .050" located on .100" centers
•Designed for wave soldering
•Snap-lock feet provide positive locking to PCB
•Designed for printed circuit board of .062 inch thickness
•Meets FCC part 68 requirements

SPECIFICATIONS:

•Height of low profile connector on board is .500" max.

CONTACT MATERIAL AND PLATING THICKNESS:

•Spring contact beryllium copper
•50 u inch nickel plate overall
•100 u inch of tin/lead on solder post over nickel
•15 u inch gold alloy in contact area over nickel
•Each spring contact portion of each contact within the female connector shall have a typical contact normal force of 100 grams

Take the guesswork out of choosing which footprint pattern and enclosure cut-out to use for PCB connectors. With LOW PROFILE Female Connectors our footprint pattern and enclosure cut-out remains the same for all of our styles of connectors. The drawing above can be used for any of our connectors and the accompanying chart shows which solder post holes need to be drilled. Enclosure cut-out dimensions are also shown.

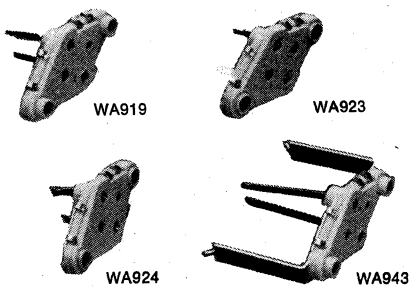
POWER TRANSISTOR SOCKETS



Heavy duty, fully insulated transistor sockets, TO-3 style, are molded of UL approved glass filled polyester and can be supplied with printed circuit or panel mount saddles. Spring brass or phosphor bronze contacts are available with cadmium, tin or gold plating. Molded bosses in casting eliminate the need for separate washers.

"Tiered Terminal": Two rows of the type 970 DS are offset by half of the pitch. Produces an effective pitch of 2.5 mm/0.096 in.

*: Terminal strips can be butted side by side to form any requested pole configuration without losing center-to-center spacing.

†: Each circuit is equipped with a test hole.

△: A2 and 3 pole version of the block is available featuring the Dovetail Interlocking System, enabling 2 or more blocks to be joined by the slot/key interlock. The advantages of this feature are flexibility and the stocking of only 2 and 3 pole blocks.

Terminal body accommodating 20-12 AWG: available for types: 97 EDS, 977 DS, 977 DPDS. It allows the connection of several conductors per pole.

Extra Features: Screen print marking, adhesive labeling strips. Blocks can be supplied without wire protector. Most types can be supplied with solder pins exceeding their standard length and up to 75mm/3 in. long.

Mil Spec: Various mil-specified insulating materials can be provided upon request.

Moulding: Glass fibre reinforced Polyamide 6.6, grey color
Upper temperature limit: short-time 200°C/392°F
continuous100-120°C/212-248°F
Cold resistant to: −50°C/−58°F

Terminal Body: Tin-plated Brass

Soldering Pin: Tin-plated copper, for excellent solderabiity

Wire Protector: Copper alloy

Screw: Zinc-plated steel, yellow chromated

WECO® PLUG-IN SCREW CONNECTORS FOR PRINTED CIRCUITS

The plug-in screw connectors consist of two parts, plug and header. Various models and combinations are available.

The header is soldered to the printed circuit board. The plug is then plugged onto the header and can easily be disconnected, when needed.

Once unplugged, the PC pins in the header can be used as test points.

Each screw contact of the plug is equipped with a wire protector to protect the conductor against the turning screw. All M3 screws are deeply recessed into the insulating moulding and do not work loose.

A stainless steel spring with an extra long spring-way provides the contact pressure to ensure a reliable connection.

All types are 5 mm/0.197" or if requested in 10 mm/0.394" center-to center spacing. They can be aligned to any requested pole configuration without losing center-to center spacing.

All plugs will be shipped unmarked, as standard. On request, they can be numbered consecutively or marked according to customer requirements.

MODELS AND COMBINATIONS AVAILABLE

Plug	Header	Description	Page
97 FBWDS	97 FBWP	Top access for screws and front access for wiring. Plug removal is from top (vertical direction).	C•1561
97 FBWDS	97SLW	This Pin Strip comes in 64 pole length. Simply snap off the size required. The Pin Strip fits perfectly underneath the plug and does not extend beyond the plug dimension.	C•1561
97 NFBWDS	97 FBWP	This combination differs from 97 FBWDS insofar as the plug interlocks securely with header. For deplugging, one has to bend back barrier of header slightly to open the interlocking. This combination is especially useful in vibration treated environment.	C•1561
97 RFBWDS	97 RFBWP	This combination is identical to 97 FBWP / 97 FBWDS, except that the plug features projecting barriers between each pole at the wire entrance side. Thus improved air gaps and creepage distances are provided.	Similar to description on page C•1561. For dimensional data and Order No's ask WECO
97 FBWDS	LST 1.3 x 6.5 Single PC Pins	This combination features individual PC pins instead of a header. They will be individually ordered, inserted into the PC board and then soldered. The plug connects then directly to the pins.	C•1561
97 FBSDS	97 FBSP	Screw access from the side, wiring access is from top. Plug removal is from the top (vertical direction). This version minimizes PC board space used.	C•1562
97 FBSDS	97 SLS	This Pin Strip comes in 64 pole length. Simply snap off the size required. The Pin Strip fits perfectly underneath the plug and does not extend beyond the plug dimension.	C•1562
97 RFBSDS	97 RFBSP	This Combination is identical to 97 FBSDS / 97 FBSP, except that the plug features projecting barriers between each pole at the wire entrance side. Thus improved air gaps and creepage distances are provided.	Similar to description on page C•1562. For dimensional data and Order No's ask WECO
97 FBSDS	LST 1.3 x 6.5 Single PC-Pins	This combination features individual PC pins instead of a header. They will be individually ordered, inserted into the PC Board and then soldered. The plug connects then directly to the pins.	C•1562

Based on the standard program of screw-connectors for printed circuits an unmatched line of Plug-In Systems are available. A stainless steel spring provides the contact pressure to ensure a reliable connection not only to the plug, but also to other components. All systems offered provide for a quick connect and disconnect of wiring to PCB. There are many advantages and benefits to using these components:

- Subassemblies manufactured at different places are equipped with either the plug or header of the selected WECO plug-in screw-connector system. At the time the final assembly is to be finished one has only to insert the plug into the header. No more wiring is necessary.
- Peripheral appliances can be connected to the main PC-board avoiding risk of changing wires by mistake.
- For service purposes a PC-board can easily be disconnected. The plug may then be used for testing the PC-board.
- The plug also connects onto the PC-board, when direct wiring into a screw-connector is difficult because of limited space.
- Service-ability.

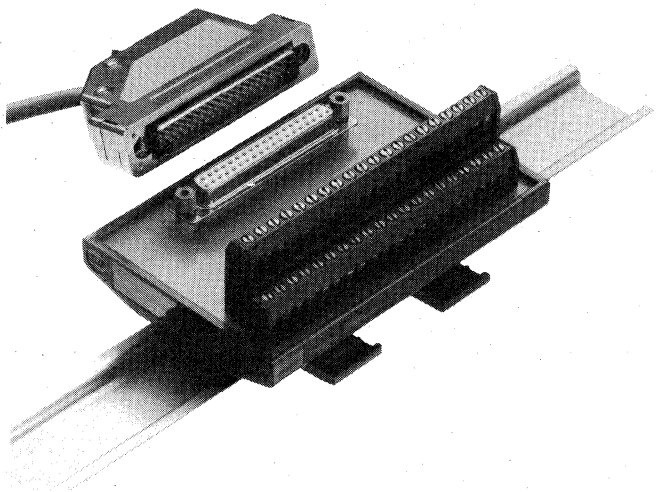
WECO® ELECTRONIC MODULES FOR MOUNTING RAILS TO DIN EN 50 022 AND DIN EN 50 035



System Description:

Connecting terminals for printed circuits have served for years as the transition element between external wiring and the circuit board, i.e. as a connection between the device being controlled and its control or between one printed circuit another one. In many cases, it is not sufficient, however, to use a single simple electrical connection, but it is necessary to provide a connection to various voltages, wiring systems or to provide a galvanic isolation of the components.

The modules are constructed from polyamide bases which are capable of being connected together to make longer bases. The bases are constructed of pieces of different widths plus the end pieces and locking feet which can be placed under the bases as required. They are especially designed for DIN EN 50022 and DIN EN 50035 mounting rails. The modules are connected and disconnected from the mounting rail by the simple operation of an unlocking lever.

The circuit boards are made of fiberglass reinforced epoxy resin. A layer of protective coating protects the circuit side from dust and moisture.

The connectors used are either screw connectors or tab type connectors.

Standard Modules Available: D Subminiature Interface, IDC Interface, Relay, Diode, Component, Power Supply, Lamp Test, Fuse, Varistor, Rectifier, Indicator, Semiconductor Switch, and I/O Carrier Modules.

Specific custom modules can be provided. Contact WECO for more information.

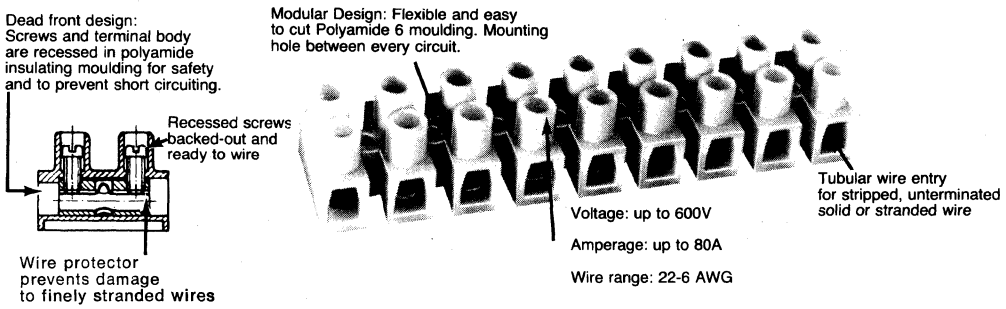
WECO® SOCKET TERMINAL STRIPS FOR PANEL/CHASSIS MOUNTING



High circuit density from 39-21 circuits per foot. Depending on product type selected.

International Approvals:

The terminal strips are used for connecting stripped, unterminated, stranded or solid copper wires; ranging from 22-6 AWG, depending on product type selected. Each strip has 12 circuits and can easily be field cut to the required number of poles. They can also be ordered factory-cut in any requested pole number.

A mounting hole is provided between each circuit. The terminal screws are backed-out and ready for wiring. The screws are protected against working loose and cannot fall out.

Each circuit has a wire protector to prevent damage to the wire from the turning screw. The wire protector is a thin steel plate placed between screw and wire. All metal parts of the terminal are completely recessed in the flexible polyamide 6 moulding. This dead-front design ensures safety and prevents short circuiting. Its flexible construction allows use on uneven surfaces. For proper circuit identification, we supply marker strips. They may either be factory numbered or individually marked with a felt pen. The terminal strips meet most world approvals, including UL, CSA & VDE.

Terminal strip types 302 HDS and 323 HDS can be supplied with screw/solder lug connections. Please contact WECO for complete catalog.

How To Order: Please indicate Type and No. of circuits requested, e.g.:

302 HDS-12 is terminal block 302 HDS with 12 circuits.

BST 302-12 is blank marker strip for twelve circuits. Shall marker strip be factory labelled, please provide sketch showing marking arrangement.

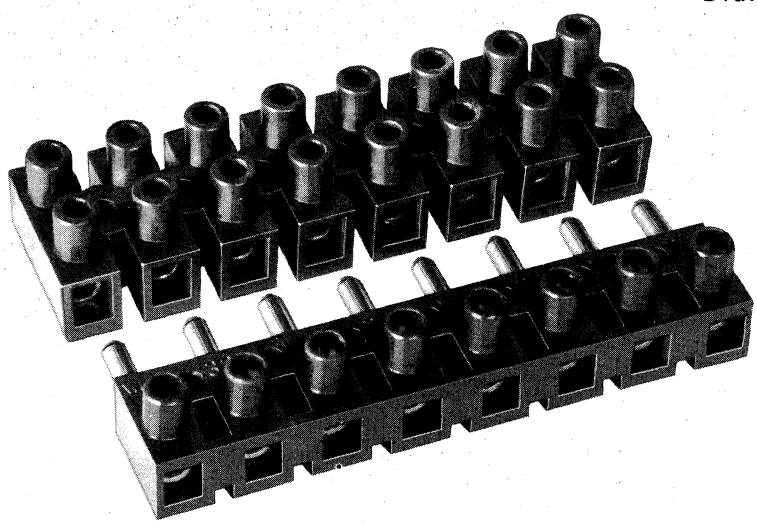
WECO® PLUG AND SOCKET SCREW-CONNECTOR SYSTEMS FOR PANEL/CHASSIS MOUNTING

Drawings see facing page.



International Approvals: VDE rated 0110

Plug and Socket Connectors are particularly suitable for installations where simple circuit closing and opening is required.
By pre-wiring various equipment sections, it is possible to use Plug and Socket Connectors to provide a quick and reliable connection at final assembly. Therefore wire confusion is avoided. Blocks can be coded (color coding, labelling, etc.) to ensure proper connection.

Some of these assemblies are available for printed circuit application. Standard strip has 12 circuits and can easily be field cut to required number of poles or ordered as required. A mounting hole is provided between each circuit. The terminal screws are backed out and ready for wiring. The dead front design is for safety and avoids short circuitry.

Each screw connection is equipped with a wire protector to prevent damage to the wire from the turning screw. The wire protector is a thin plate placed between screw and wire.

To obtain low contact resistances on connectors, a high contact pressure is required. This leads to relatively high withdrawal forces. To facilitate the assembly, we therefore recommend that from 7 poles onwards two male and one female plug and socket connector should be used.

For the protective conductor pole the connectors can be equipped with leading plugs or sockets on request. This means that the protective conductor connection is made first when plugging-in and disconnected last.

COSMO

COSMO Corporation, the world's largest manufacturer of bobbins and coil forms, is now offering a complete line of knobs. Over forty years of experience supplying the precise and demanding bobbin needs of the electronics industry enables us to provide high quality knobs for you.

Kurz-Kasch

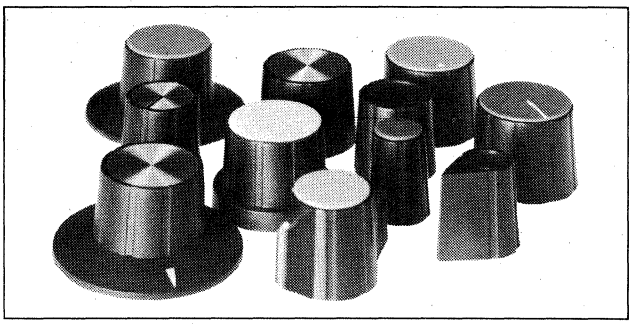
Our acquisition of the complete line of standard Kurz-Kasch knobs gives us the widest variety of sizes and styles. Many different shaft styles are available along with a choice of aluminum and plastic inlays and caps.

Custom Knobs

COSMO's track record of over 10,000 bobbin molds makes us your best choice for new custom knob designs. Our capabilities include thermoplastic and thermoset molding in a variety of materials. Our extensive finishing operations include drilling, tapping, machining, inlay and cap attachment, silk screening, hot stamping and painting.

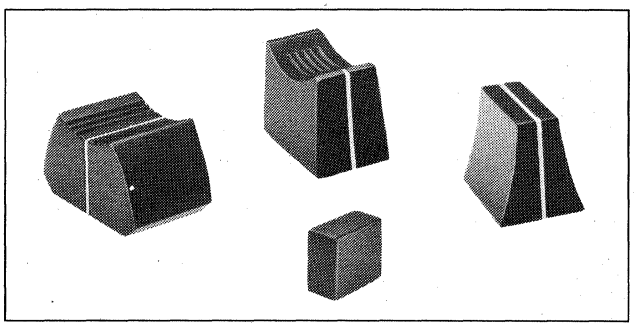
Grooved Style Knobs

These grooved side instrument knobs are molded of tough matte-finish ABS thermoplastic material. Round, box and taper skirt, pointer, and bar designs are available. Inlays and caps of spun aluminum and plastic caps in 6 colors are optional. These knobs may be stacked for concentric shaft functions.



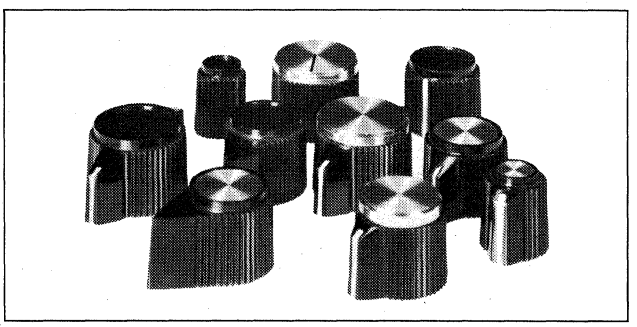
Linear Slide Knobs

Knobs for linear controls are molded of ABS thermoplastic material. They feature paint filled indicator lines and serrated tops for one finger actuation.



Serrated Style Knobs

This popular line of crisp, serrated style instrument knobs includes round, pointer, bar, tapered skirt, and spinner knobs molded of mirror-finish black thermoset phenolic material. These knobs may be topped with aluminum inlays and caps including the striking diamond bevel cap. Dual and triple control stacked knobs can be constructed.



Solid Aluminum Knobs

Aluminum alloy knobs are available in smooth body, wide and narrow fluted, and full and semi knurled designs in all black, all silver, or black and silver finishes. Contrasting indicator lines are standard.

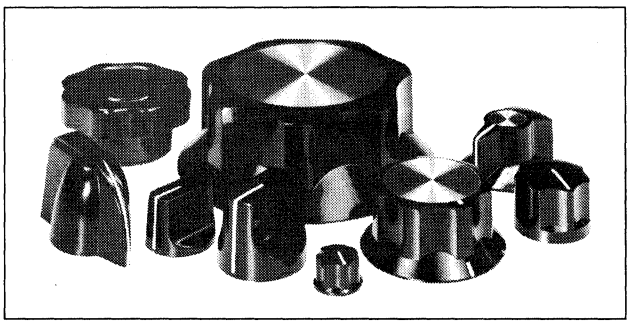
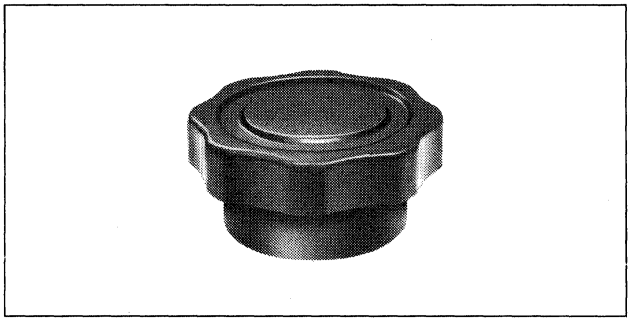
Fluted Style Knobs

These classic fluted side knobs feature solid construction, molded of gloss black thermoset phenolic resin. Paint filled indicator lines, vinyl and brass pointers, and glittering aluminum inlays add to their appeal.



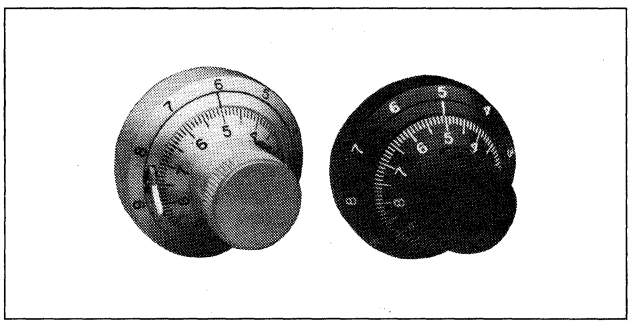
Control Knobs

These rugged control knobs, molded of heavy duty black thermoset phenolic material, feature a solid...not "cored out" design. Wide flutes and rounded edges provide a comfortable grip in high torque applications. These are also some of our largest knobs.



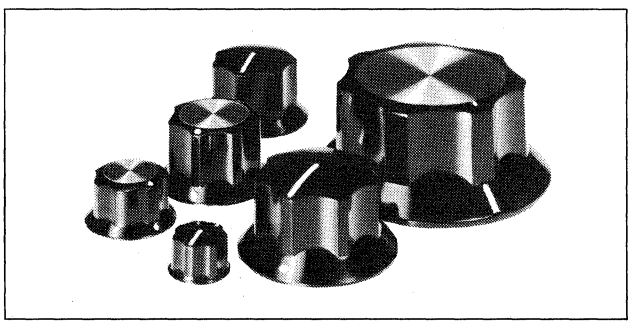
Multi-Turn Dial Knobs

These multi-turn calibrated dial knobs are designed specifically for multi-turn potentiometers up to 10 turns. They are available in machined aluminum or molded plastic, both with and without brakes.



Bar and Pointer Knobs

Mirror-finish black thermoset phenolic material adds to the sleek lines of these pointer and bar knobs. All models are available with paint filled indicator lines. Spun aluminum inlays are also available.



Mechanical Knobs

Terminal nuts, gear balls, and stud knobs are available in a wide variety of sizes and threaded attachments. Brass inserts and studs of all sizes and lengths add to the variety. Normally molded of black thermoset phenolic resin, an optional heat resistant material is also available.

DATAKOAT™ PROTECTIVE COATINGS

DATAKOAT is a 100% acrylic high-solids water-clear coating for metals and plastics. It encapsulates dry transfers in a tough film. Its solvents will not attack most plastics, lacquers or cured enamels. The dry film has a high dielectric strength, is very flexible, moderately hard and extremely resistant to weathering and UV exposure. DATAKOAT is not recommended for transfers on paper.

04177 DATAKOAT Gloss Spray (12 oz. net wt.)	**4.95**
04178 DATAKOAT Matte Spray (12 oz. net wt.)	**4.95**

HARDKOAT™ PROTECTIVE COATINGS

HARDKOAT is a clear, very high-solids quality cellulosic resin for paper, wood and other porous surfaces. Its solvents fuse the dry transfer into the surface while its resins bond to the surface with an extremely hard, flexible film. HARDKOAT may be used on metals and many painted surfaces where it gives superior protection against abrasion and scratching. Its solvents temporarily soften many plastic materials, so it should be used with caution. Multiple heavy coats may have a very faint yellowish tint. Use DATAKOAT if an absolutely water-clear coating is essential.

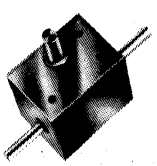
RIGHT ANGLE RATIO DRIVES — Versatile, Miniaturized, Right Angle Rotary Controls

RAWG ( )
RABG ( )



Dual output stainless steel shafts at right angles to input, provide ideal type instrument control. With matched bevel, worm gears cover wide range of ratios.

Especially useful for handling spring or gravity-loaded components. Output shaft automatically locks in any desired position yet remains free for smooth adjustment by input shaft. Assembled in dust-proof housings, gears are permanently pinned in place mounted in oilite bearings, and held under constant pressure.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

SLIP-CLUTCH KNOB with Spinners

KS-1375-(4) & KS-1376-(4)

For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch"* automatically disengages and slips when pre-determined torque has been exceeded. Knobs are fluted, and equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard against cranking beyond normal stops.

*Normally set for 3-6" lbs./in. Can be modified for other requirements.

Model K-1376-(4) is identical with K-1375 with additional feature retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in open or closed position. K-1376 for use where economy of space is essential.

Cat. Nos. K-1275-(4) & 1276-(4)
In appearance, these knobs are identical with K-1375 and K-1376 but without Slip-Clutch. Molded Bakelite-to-metal-insert construction, two set screws for attachment to shafts.

PREFIX

S (Slip Clutch)	**SLIP CLUTCH:** Prevents over torquing delicate mechanisms. Functions as standard knob between limit stops. When limit is reached and knob rotation continues, clutch overrides the stop without applying torque in excess of specifications. Driving torque in detented position .5-6 LB./IN. (depending on knob diameter).
PT (Push-To-Turn)	**BRAKE KNOB:** Prevents control setting from movement due to shock or vibration.
PSC (Push-To-Set)	**Brake Knob W/ OVERRIDING CLUTCH:** Same as "PT" with added feature of "S" (slip clutch) combined. Knob can be rotated without changing setting (if not pushed in).
PSCE (Push-To-Set /w Limit Stop)	**Brake Knob W/ Overriding Clutch & LIMIT STOP:** Same as "PT" & "PSC" with added feature of limit stop (320° MAX) built in.
LSC*** (Pull-To-Turn)	**Brake Knob W/ Overriding Clutch — PULL-TO-TURN:** Same as "PSC" except pull-to-turn. For use in extremely hostile environment, i.e.: Life Support Equipment.
PTN (Spin Free Push-To-Turn)	**SPIN FREE PUSH-TO-ENGAGE:** Prevents shaft from inadvertent turning — Knob spins free unless depressed and rotated until full internal engagement is accomplished for use where SHAFT TORQUE EXCEEDS 4 oz. in.
PTCN (Spin Free Push-To-Turn)	**Spin Free PUSH-TO-ENGAGE:** Same as "PTN" except for use where SHAFT TORQUE is LESS THAN 4 oz. in.
PTNN (Spin Free Press-To-Turn)	**Spin Free PRESS-TO-TURN:** (Friction) Prevents inadvertent change of setting. Use only where intent to turn is required. Must be pressed in while turning, for low torque applications.
LTN (Spin Free Lift-To-Turn)	**Spin Free LIFT-TO-TURN:** Same at "PTN" except pull-to-turn. For use where SHAFT TORQUE EXCEEDS 4 oz. in.
TC (Torque)	**TORQUE KNOB:** (Friction) For use where positive feel is desired and/or where minor excursions of shock and vibration are anticipated.
LEPR (Limit Stop & Release)	**LIMIT STOP W/ QUICK RELEASE:** For use where limited travel (0-? degrees) is required. Push-To-Release stop and continue to the next function.
LELR (Limit Stop & Release)	**Same as LEPR except PULL-TO-RELEASE:** For use in extremely hostile environment, i.e.: Life Support Equipment.

Function, styling, handling and simplicity of assembly were the designers' main criteria in the development of the Selco range of collet knobs. The various accessories (caps, pointers, figure dials and nut covers) push-fit into the basic knob to give added versatility. Caps are available in over 10 different colors.

MATERIALS

All knobs, caps, pointers and nut covers are made from Nylon and have a matte finish. The transparent figure dials are made from polycarbonate and the colored dials are of Nylon.

Collets, sleeves and nuts, installed into the knobs during manufacture, are of brass. They will accommodate a wide range of shaft lengths and bush lengths. All molded parts are stable in the temperature range −20°C to +70°C.

TURNING TORQUE

The torque that can be transmitted by knobs without slipping, assuming the knob has been adequately tightened on the shaft, is as follows:

Knob Type	Shafts 2mm, 3mm, 4mm 3/16 in and 1/8 in	Shafts 6mm and 1/4 in
S10 S11, SP11, K11 S13	cm kg 2.5	cm kg —

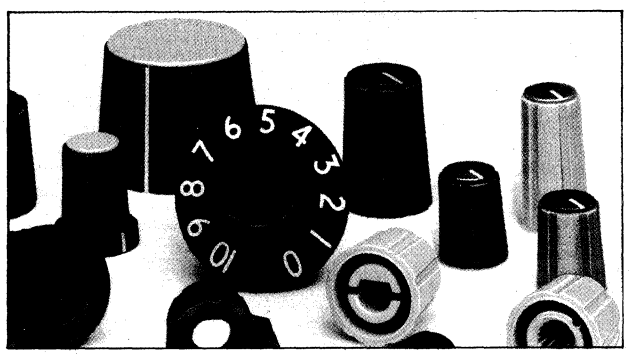
PUSH-ON KNOBS



Selco push-on knobs provide a fast, secure method of shaft attachment. The internal molding is designed to grip the shaft securely with the option of a built-in metal compression ring. The knobs, molded from Nylon, are available in black, red, and gray and have a matte finish. Colored caps are available in plain, with-line and with-spot versions in over 10 different colors.

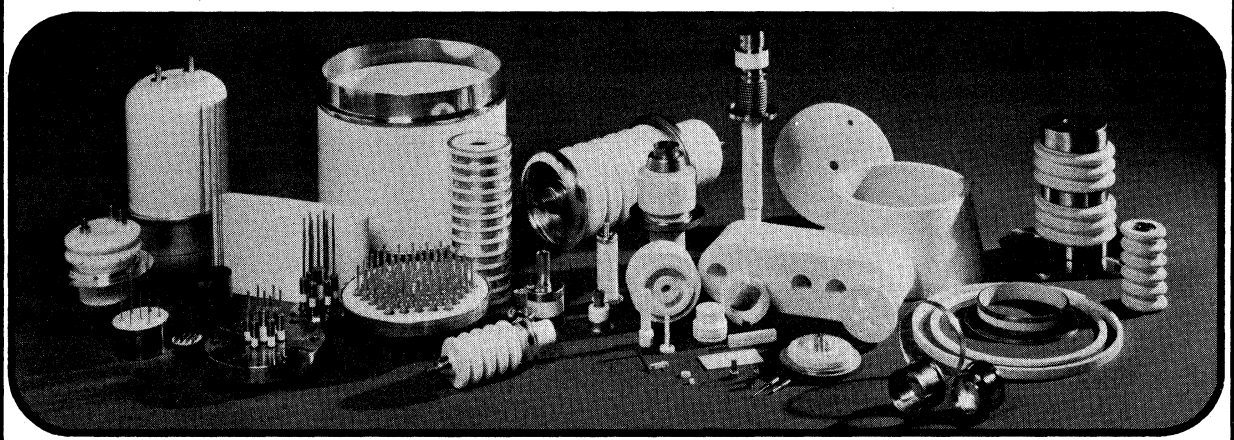
ALBEROX ... *For outstanding performance in high temperature, hermetic terminals.*

We're SPECIALISTS in brazing METAL parts to high alumina CERAMICS for demanding HIGH TEMPERATURE, HERMETIC applications.

CUSTOM HERMETIC CONNECTORS Multipin hermetic connectors for demanding vacuum and space applications requiring 400°C. bakeout — conditions where glass connectors won't stand up — are being produced in a variety of configurations. To save cost, Alberox can also provide connector sub-assemblies such as pin decks to be brazed or welded into shells or flanges by the customer.

MINIATURE TUBE AND PIN SEALS Many high temperature applications require insulated pin or tube feedthrus. These are available with weldable or brazeable metal parts, and can be added to covers or flanges, etc. All Alberox feedthrus are suitable for cryogenic environments.



Since 1961, we have designed and produced a wide variety of seals for custom applications in diverse components such as . . .

VACUUM FEEDTHRU TERMINALS
CERAMIC ELECTRON TUBE AND VACUUM SWITCH ENVELOPES
NUCLEAR REACTOR PENETRATOR FEEDTHRU TERMINALS and INSULATORS
SQUIBB and DETONATOR CONNECTORS
SPACE FLIGHT HERMETIC CONNECTORS
JET ENGINE THERMOCOUPLE COMPONENTS
HIGH PRESSURE OIL WELL LOGGING FEEDTHRUS
CAPACITORS and TRANSFORMER TERMINALS

In addition to the above, Alberox has designed and produced state-of-the-art components for critical nuclear devices.

The Alberox plant was designed and built specifically for the efficient production of ceramic-to-metal seals. We manufacture our own A-950 high alumina ceramic, which enables us to optimize on the best metalizing process for this ceramic; thus we can provide superior seals. By making our own ceramic, our customers benefit by fast delivery on custom designs.

Another important feature of Alberox is that all of the plating requirements are met "in-house", including nickel, gold, copper, silver, bright tin and solder plating!

We have several types of BRAZING FURNACES for brazing ceramic-to-metal and metal-to-metal parts in HIGH VACUUM, or HYDROGEN, ARGON or any other specified atmosphere! The standard operating procedure is to custom program the brazing cycle, taking into account the ceramic, the types of metals, braze materials and the atmosphere.

Alberox exercises complete control, from the design stage right through all manufacturing operations — to meet or exceed the highest quality standards and maintain the fastest delivery in the industry. Products made by Alberox are assured to outperform all design parameters set for them!

HIGH PRESSURE FEEDTHRUS *Alberox A-950 Alumina* has extraordinarily high compressive strength (350,000 psi). By using this strength to its best advantage, ceramic-to-metal seals can be produced to withstand high static or dynamic pressures. Thousands of these seals have been manufactured by Alberox.

MULTITERMINAL FEEDTHRUS Multiterminal feedthrus differ from multipin connectors in that individual feedthru terminals are brazed or welded into a metal deck or flange. These feedthrus are generally used for higher voltage applications than can be accommodated by a regular ceramic pin deck or connector. Alberox has an extensive line of catalog tubular terminal bushings which are often used for the individual feedthrus. In this way, custom multiterminal feedthrus can be delivered quickly.

POWER FEEDTHRUS Copper, or just about any other type of metal, from ⅛ inch to over 1 inch in diameter can be provided in power feedthrus. Modifications of our standard catalog tubular and fluted terminal bushings are often perfectly suited, and custom ceramic-to-metal seal designs can be easily accommodated. Weldable or brazeable flanges also can be added to the feedthrus to allow easy installation on existing flanges or bulkheads.

INSULATORS AND STANDOFFS Insulators and standoffs can be supplied in tubular or fluted shapes, bare or glazed, with or without metal adapters or studs. Alberox manufactures plain ceramic parts for use as spacers, insulators, supports, isolators, decks, or washers. Metalized and glazed cylinders are also available for envelopes of high power electron tubes such as Thyratrons or for vacuum switches.

CATALOG HIGH VOLTAGE BUSHINGS Alberox stocks the largest variety of high voltage tubular and fluted high alumina terminal bushings in the industry. Modifications to these catalog items are easily made. Typical modifications are: special studs, brazed-in-center conductors, different metal parts, finishes and ceramic dimensional changes. Fast delivery at reasonable prices can still be maintained. Ask for Catalog #775 which illustrates details of these parts.

Alberox is ready to assist you with your ceramic-to-metal seal design requirements. When you need FAST DELIVERY of SUPERB ceramic-to-metal seals, at realistic prices — contact ALBEROX.

CAMBRIDGE

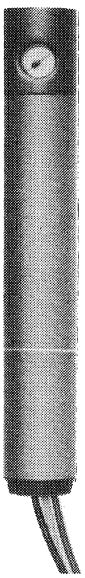
Series 300 Airflow Switches

The Cambridge Airflow Switch is an all Solid-State device designed to sense cooling airflows and protect valuable and sensitive equipment from damage in the event of a cooling system degradation or failure.

The Cambridge Bi-Directional Switch will equally sense airflows from either of two opposite directions. The Uni-Directional Switch allows more directional selectivity by sensing airflows from one unique direction only. (See Figure 1.)

With a normal airflow sensing range from under 250 FPM to over 1300 FPM, depending on setting, the Series 300 offers compact size, high reliability, and resistance to mechanical shock and vibration.

The output of the Series 300 Airflow Switch is logic compatible, or can switch alarms, relays, or other circuits. Normally-open (N.O.) and Normally-closed (N.C.) versions are available.



SOLID STATE AIRFLOW SWITCHES, CONTROLLERS, & COOLING MANAGEMENT SYSTEMS

WhisperCool-AF Airflow Controllers

The Cambridge WhisperCool airflow controller (WAF) combines the features of the 300A airflow switch with a closed loop controller for fans and blowers.

The WAF fault signal may be set to any of the standard calibration. The control line automatically provides a signal, (pulse width modulated) to the airmover, that will maintain the airflow velocity higher than fault levels.

The WhisperCool-AF may be connected directly to the DC motor of an airmover that is provided with a logic level enable/disable feature. If this feature is not available, the WhisperCool-AF may be used in conjunction with a driver module (DRM30 or DRM60) to control the fans/blower.

COOLING MANAGEMENT SYSTEM CONTROLS, FANS AND BLOWERS

Custom engineered cooling management and environmental control systems for remote or office based telecommunications equipment, computers and other sensitive electronic devices are being introduced by Cambridge Aeroflo, Inc.

The Cambridge Cooling Management System features variable speed or two-speed controls for fans or blowers and includes built-in dc-to-dc conversion, failure indicators, temperature controls, and fault reporting. Customized to user space and electrical requirements, power is provided in accordance with environmental factors and can incorporate fail-safe designs if necessary.

Supplied as a single board controller or complete with sensing devices and airflow switches, the Cambridge Cooling Management System optimizes the performance of an entire fan or blower network. The sensing devices and airflow switches respond to all environmental factors including ambient temperature, air speed, altitude, relative humidity, and can detect reversal in air flow.

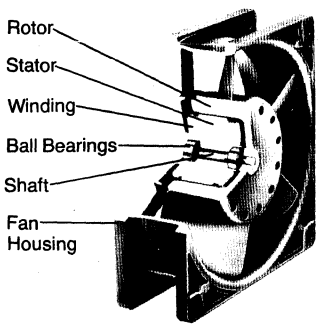
Tubeaxial Fans ACCESSORIES

One simple, reliable design for every electronic application

The building block for all ebm Tubeaxial Fans is the external rotor motor. With this design, the external rotor rotates around the internal stator. The impellers are attached directly to the external rotor which allows excellent heat dissipation and long life.



Safety

All fans are designed to meet UL, CSA and VDE standards. Approved products are listed in UL yellow card E54522; CSA file LR3145 and several VDE files. It is the responsibility of the user to be sure fans are installed and operated in accordance with all safety codes.

Construction

All-metal construction provides excellent heat dissipation, long life and structural stability. The fan itself functions as heat sink by effectively transferring heat from the motor to the air stream via the metal impeller blades. The impeller blades are sheet steel, precision machined and welded to the metal rotor. The housing is die-cast aluminum or zinc.

The rotor and impeller blades are dynamically balanced in two planes to Quality Grade 2.5. In addition, the fans are finished with an electrostatically applied black finish to protect against severe environmental conditions.

Availability

Products listed are available from stock. ebm distributors maintain stock which is backed by ebm Industries' own inventory, the largest available in the U.S.

Other Sizes and Types

ebm offers one of the broadest fan product lines in the industry. If the size you need is not listed, contact your ebm distributor, representative or ebm directly. Typical options are Hall Effect monitor, dual voltage, flying leads and fans without housings.

Technical Assistance

A large staff of experienced application engineers is ready to discuss your specific heat transfer and air movement requirements. Let them help you select and specify the products needed for your application.

Centrifugal Blowers
Crossflow Blowers

In stock and ready for shipment; Brushless DC with integral electronics also available.

Single Inlet Blowers

All ebm centrifugal blowers feature a external rotor motor and heavy-duty housing for long, trouble free life. This compact design provides a smaller form factor, excellent heat dissipation and lower operating costs.

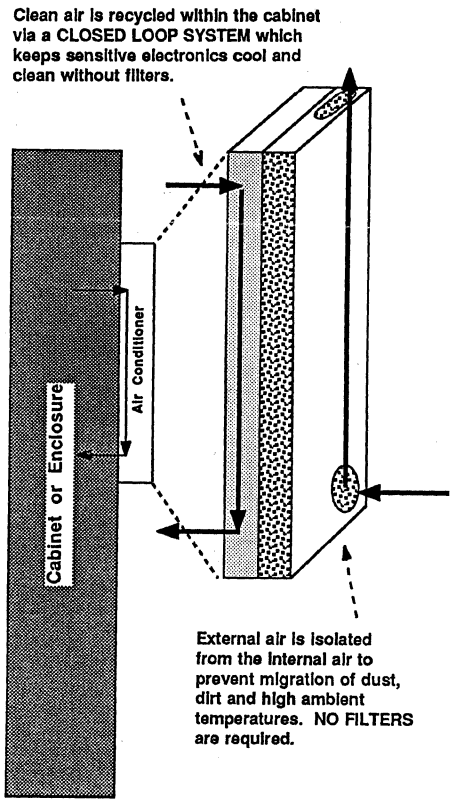
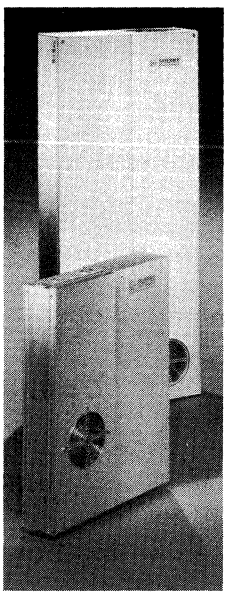
Filterless Air Conditioners are perfect for keeping electronics cool & clean in hot & hostile environments





Availability
Seifert air conditioners are in stock and ready for immediate shipment. In addition, ebm application engineers are available to help you select and specify the unit best suited to your application requirements.

No-filter Air Conditioning
By using a unique, extruded aluminum condenser (Seifert Electronic U.S. Patent #4475358, W. German Patent #DBP3136226), the narrow aerodynamic profile guides the air-flow through the heat dissipation cycle without collecting contaminants.

Cabinet Protection
Seifert air conditioners are of closed-loop design which means that two entirely separate air circulation systems flow through the air conditioner. One system circulates clean air in the internal atmosphere of the sealed enclosure. The second circulation system is for outside ambient air which is isolated from the inside of the cabinet.

Humidity Control
A thermo-sensor is available to monitor the ambient temperature and to maintain cabinet temperature avoiding condensation on the electronics when the panel doors are open. Build up of static electicity in areas of extreme dehumidification is also prevented.

Special Features
- No filter needed
- Very narrow, 6 1/8", profile
- Energy efficient low power consumption
- Maintenance-free, long life expectancy
- Fully operational at ambient temperatures up to 60°C (140°F)
- Cabinet temperatures adjustable from 20°C to 50°C (68°F to 122°F)
- Operating condition noted by two LED indicators.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

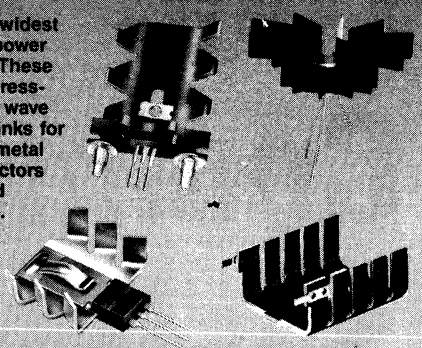
YOUR SINGLE SOURCE

FOR ALL YOUR STANDARD AND CUSTOM COOLING NEEDS

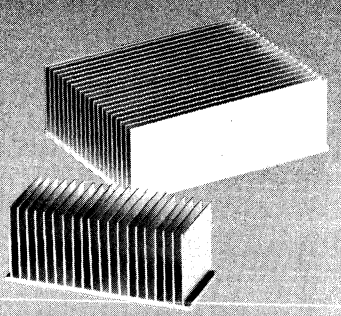
Low Power Heat Sinks

Choose from the widest selection of low power heat dissipators. These include clip-on, press-on, snap-on, and wave solderable heat sinks for both plastic and metal cased semiconductors for PC boards and chassis mounting.



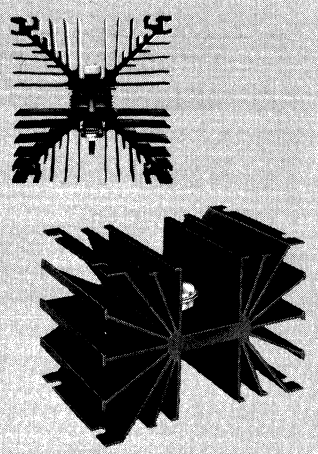
High Fin Density Extruded Heat Sinks

Choose from a variety of unique high fin density extrusions to provide maximum cooling efficiency per unit volume. These heat sinks give the same cooling performance as other heat sinks using nearly twice as much space. High fin density heat sinks provide maximum surface area and performance with relatively low weight.



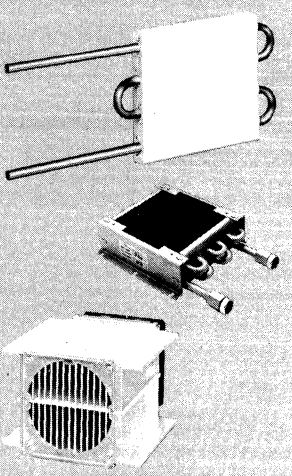
Extruded Heat Sinks and Extrusions

Choose from hundreds of existing shapes and sizes. Or, let us design that unique shape you need to optimize performance and cost. From design to finished heat sinks, and from small prototype quantities to large production quantities, our capabilities can meet all your requirements.



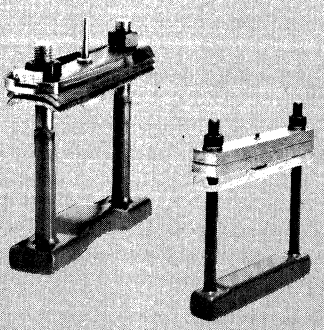
Active Cooling Heat Exchangers

Choose from a variety of liquid cooling and forced convection devices to provide safe temperature levels of densely packed semiconductors. We offer high pressure tube and fin type units (150 psi) made of copper tubes and fins mounted into an aluminum frame. Low pressure (15 psi) cellular type units provide excellent thermal performance while exhibiting very low pressure losses on both the air and water circuits. We offer custom design and manufacturing capability of compact high performance units to meet your requirements.



Mounting Clamps

Choose from clamps with compression ratings from 800 to 16,000 psi. These mounting clamps are for industry-standard compression rectifiers and SCR's. Unique force indicators provide direct reading of clamping force. All clamps are accurately centered giving uniform pressure. A variety of standard heat sinks are available for use with these mounting clamps.



Accessories

Choose from a wide selection of accessories to facilitate the installation and improve the thermal performance of both standard and custom heat sinks. We offer thermally conductive insulators, thermal joint compound, mounting hardware, Sync-Nut™ (insulated and non-insulated) wave-solderable locknuts, epoxy systems, and installation tools.
